Internet of Everything Beniamino Di Martino,Kuan-Ching Li,Laurence T. Yang,Antonio Esposito,2017-10-15

This book focuses on the Internet of Everything and related fields. The Internet of Everything adds connectivity and intelligence to just about every device giving it special functions. The book provides a common platform for integrating information from heterogeneous sources. However, this can be quite reductive as the Internet of Everything provides links not only among things but also data, people, and business processes. The evolution of current sensor and device networks with strong interactions between people and social environments will have a dramatic impact on everything from city planning to first responders, the military, and health. Such a shared ecosystem will allow for the interaction between data, sensor inputs, and heterogeneous systems. Semantics is a fundamental component of this since semantic technologies are able to provide the necessary bridge between different data representations and to solve terminology incongruence. Integrating data from distributed devices, sensor networks, social networks, and biomedical instruments requires first of all the systematization of the current state of the art in such fields. Then it is necessary to identify a common action thread to actually merge and homogenize standards and techniques applied in such a heterogeneous field. The exact requirements of an Internet of Everything environment need to be precisely identified and formally expressed, and finally the role of modern computing paradigms such as Cloud and Fog Computing needs to be assessed with respect to the requirements expressed by an Internet of Everything ecosystem.

Emerging Trends and Innovation in Business and Finance Rim El Khoury, Nohade Nasrallah, 2023-10-28

This book explores diverse dimensions of innovation in business and finance from a micro as well as macro perspective through various case studies and analyses of trends. The previous decade is known as the era of digital transformation and innovation. The rise of new technologies is having an impact on the global trends and leading to innovation in business and finance. In this competitive market, businesses and financial institutions must be responsive to the trends in order to survive and thrive. Governments must cope with the complex and uncertain environments by being smart, transforming service delivery, and implementing smart governance practices. Entrepreneurs and investors are faced with alternative sources of finance and investment. However, keeping up with these trends and innovations is fraught with its own set of challenges. Thus, it is important to analyze new and emerging technologies and innovations through a myriad of disciplinary lenses. This book not only expands conceptual understanding of digital transformation and innovation by presenting strong empirical evidence but also by adding to the vigorous worldwide policy discussion on how to assist businesses in the digital transition. The book will be useful to scholars and researchers of business management, financial management, business economics, international business, human resources, and marketing. It will also be of interest to entrepreneurs, policymakers, academicians, and practitioners in the field.
