Deforestation and Economic Growth in the Brazilian Amazon Lykke E. Andersen,2002-12-12 A multi disciplinary team of
 authors analyze the economics of Brazilian deforestation using a large data set of ecological and economic variables They
 survey the most up to date work in this field and present their own dynamic and spatial econometric analysis based on
 municipality level panel data spanning the entire Brazilian Amazon from 1970 to 1996 By observing the dynamics of land use
 change over such a long period the team is able to provide quantitative estimates of the long run economic costs and benefits
 of both land clearing and government policies such as road building The authors find that some government policies such as
 road paving in already highly settled areas are beneficial both for economic development and for the preservation of forest
