Warranty Cost Analysis Wallace Blischke, 1993-09-17 Considers cost and optimization problems from the manufacturer's and the buyer's points of view The work discusses a variety of warranty policies and the mathematical models for the analysis of related engineering and management issues All standard consumer product warranties are covered

A Businessperson's Guide to Federal Warranty Law, 1987 *Cost Risk, Quality Risk, and the Optimal Repair Price and Warranty Strategy* Evan J. Douglas, Bentley College. Institute for Research and Faculty Development, 1987 *On Estimating the Cost of a Warranty* Edward W. Frees, 1986 *Risk Preferences and Demand Drivers of Extended Warranties* Pranav Jindal, University of Chicago, 2012 The objective of this paper is to understand what drives consumers to buy extended warranties and pay high premia for them We primarily focus on the role of risk preferences and disentangle and study their relative importance Empirical and behavioral research on insurance is at odds with whether diminishing returns curvature of the utility function or loss aversion and non linear probability weighting lead to the observed consumer behavior This is primarily due to the inability of standard choice data to separate curvature of the utility function loss aversion and non linear probability weights and the need to rely on strong parametric assumptions We design two conjoint studies consistent with simultaneous and sequential decision making with choices over washing machines with and without extended warranty where failure

probabilities and repair costs are given to subjects Using stated choice data from the survey consumer preferences degree of curvature loss aversion and probability weights can be non parametrically identified We find that loss aversion is significantly more important than curvature and probability weights in explaining extended warranty choices These findings are robust to different specifications of the utility function and risk preferences Importantly failure to decompose risk averse behavior into that arising from curvature loss aversion and probability weighting leads to lower washer and warranty prices and under predicts the rate of change of warranty prices with varying repair costs We test theory on complementary good pricing and find that estimates from the sequential choice survey rationalize the high premium consumers pay for extended warranties Finally forcing different retailers to sell washers and extended warranties increases decreases the washer warranty price and makes consumers worse off A 5% discount on the washer price makes consumers indifferent to the proposed policy intervention

Cyclicalities of Add-on Pricing Branko Boskovic, Sacha Kapoor, Agnieszka Markiewicz, Barry Scholnick, 2020 What explains apparent price rigidity over the business cycle This paper shows that price fluctuations may be hidden in prices of add ons Using 10 years of extended warranty data from a nationwide Canadian retailer we show that extended warranty prices respond strongly to changes in local economic activity whereas prices of underlying durable goods do not The procyclicality is driven by a shift in price setting behavior where local stores use extended warranty discounts to make base durable demand less price elastic and as a result increase sales of durable goods Discounts on extended warranties were especially sharp during the Great Recession
