Peptides and Peptide-based Biomaterials and their Biomedical Applications Anwar Sunna, Andrew Care, Peter L. Bergquist, 2017-10-26 Solid binding peptides have been used increasingly as molecular building blocks in nanobiotechnology as they can direct the assembly and functionalisation of a diverse range of materials and have the ability to regulate the synthesis of nanoparticles and complex nanostructures Nanostructured materials such as sheet fibril forming peptides and helical coiled coil systems have displayed many useful properties including stimulus responsiveness modularity and multi functionality providing potential technological applications in tissue engineering antimicrobials drug delivery and nanoscale electronics The current situation with respect to self assembling peptides and bioactive matrices for regenerative medicine are reviewed as well as peptide target modeling and an examination of future prospects for peptides in these areas

Self-Assembled Peptide Nanostructures Jaime Castillo, Luigi Sasso, Winnie Edith Svendsen, 2012-11-21 The self organization of bionanostructures into well defined functional machineries found in nature has been a priceless source of ideas for researchers The molecules of life proteins DNA RNA etc as well as the structures and forms that these molecules assume serve as rich sources of ideas for scientists or engineers who are interested in developing bio inspired materials for innovations in biomedical fields In nature molecular self assembly is a process by which complex three dimensional structures with well defined functions are constructed starting from simple building blocks such as proteins and peptides This book introduces readers to the theory and mechanisms of peptide self assembly processes The authors present the more common peptide self assembled building blocks and discuss how researchers from different fields can apply self assembling principles to bionanotechnology applications The advantages and challenges are mentioned together with examples that reflect the state of the art of the use of self assembled peptide building blocks in nanotechnology

Peptide Bionanomaterials Mohamed A. Elsayy, 2023-08-28 Molecular self assembly has been exploited by nature for developing the higher functional macromolecular structures of both the genome and proteome Inspired by nature there has been a surge of research in the last two decades for the molecular engineering of peptide based self assembling nanostructures adopting the bottom up design approach This book gives the reader an overview on the design rules for de novo self assembling peptide and reviews the diverse range of bioinspired peptide nanostructures such as sheet and hairpin helical and coiled coil self assembling short peptides and peptidomimetics collagen based and elastin like peptides silk peptides peptide amphiphiles peptides co polymers and others The book also covers the wide variety of responsive and functional biomaterials that have been innovated based on those nanostructures for various applications ranging from tissue engineering therapeutics and drug delivery to antimicrobial nanomaterials and biosensors Finally the book also discusses the peptide bionanomaterials global market and the future of the emerging
