Perception, Realism, and the Problem of Reference Athanassios Raftopoulos, Peter Machamer, 2012-04-12 One of the perennial themes in philosophy is the problem of our access to the world around us do our perceptual systems bring us into contact with the world as it is or does perception depend upon our individual conceptual frameworks This volume of new essays examines reference as it relates to perception action and realism and the questions which arise if there is no neutral perspective or independent way to know the world The essays discuss the nature of referring concentrating on the way perceptual reference links us with the observable world and go on to examine the implications of theories of perceptual reference for realism and the way in which scientific theories refer and thus connect us with the world They will be of interest to a wide range of readers in philosophy of science epistemology philosophy of psychology cognitive science and action theory *Perception, Realism, and the Problem of Reference* Athanassios Raftopoulos, Peter K. Machamer, 2014-05-14

The chapters in the book address the problem of reference as it relates to perception and to debates about realism **The Routledge Handbook of Scientific Realism** Juha Saatsi, 2017-11-22 Scientific realism is a central long standing and hotly debated topic in philosophy of science Debates about scientific realism concern the very nature and extent of scientific knowledge and progress Scientific realists defend a positive epistemic attitude towards our best theories and models regarding how they represent the world that is unobservable to our naked senses Various realist theses are under sceptical fire from scientific antirealists e g empiricists and instrumentalists The different dimensions of the ensuing debate centrally connect to numerous other topics in philosophy of science and beyond The Routledge Handbook of Scientific Realism is an outstanding reference source the first collection of its kind to the key issues positions and arguments in this important topic Its thirty four chapters written by a team of international experts are divided into five parts Historical development of the realist stance Classic debate core issues and positions Perspectives on contemporary debates The realism debate in disciplinary context Broader reflections In these sections the core issues and debates presented analysed and set into broader historical and disciplinary contexts The central issues covered include motivations and arguments for realism challenges to realism from underdetermination and history of science different variants of realism the connection of realism to relativism and perspectivism and the relationship between realism metaphysics and epistemology The Routledge Handbook of Scientific Realism is essential reading for students and researchers in philosophy of science It will also be very useful for anyone interested in the nature and extent of scientific knowledge *The Psychosocial Reality of Digital Travel* Ingvar Tjostheim, John A. Waterworth, 2021-12-06 This open access book takes a fresh look at the nature of the digital travel experience at a time when more and more people are engaged in online social interaction games and other virtual experiences essentially involving online visits to other places It examines whether these experiences can seem real to the virtual traveller and if so under what conditions and on what grounds The book unpacks philosophical theories relevant to

the feeling of being somewhere emphasising the importance of perception and being in the world. Notions of place are outlined based on work in tourism studies, human geography and other applied social fields with an aim to investigate how and when different experiences of place arise for the traveller and how these relate to telepresence, the sense of being there in another place through digital media. Findings from recent empirical studies of digital travel are presented including a survey from which the characteristics of digital travellers are identified. A review of selected interactive design trends and possibilities leads to the conclusion which draws these strands together and looks to the future of this topical and expanding field.

Linguistic Lapses with Especial Reference to the Perception of Linguistic Sounds Frederic Lyman Wells, 1906

The Problem of Perception A. D. Smith, 2005-01-01 In a major Contribution to the theory of perception A D Smith presents a truly original defense of direct realism, the view that in perception we are directly aware of things in a physical world. It offers two arguments against direct realism, one concerning illusion and one concerning hallucination, that up to now no theory of perception could adequately rebut. At the heart of Smith's theory is a new way of drawing the distinction between perception and sensation, along with an unusual treatment of the nature of objects of hallucination.

The Oxford companion to philosophy Ted Honderich, 1995 Entries on philosophers, schools of thought, subjects, theories, debates, concepts, practical issues.

Cognition and the Symbolic Processes Walter B. Weimer, David S. Palermo, 2024-06-03 Originally published in 1982, this book, following the previous volume published in 1974, continued to look at current issues in theoretical and cognitive psychology and looked for new directions for fruitful theory and research. The major concern for all the contributors was with the construction of a psychology of the higher mental processes through the evaluation of and improvement upon past efforts, as well as the exploration of related areas or disciplines for relevant new ideas. The contributors to this volume shared in common the rejection of not only behavioristic and associationistic approaches but also the sensory information processing model that earlier dominated and, by weight of numbers of adherents and publications, still dominated cognitive psychology at the time. Today it can be read and enjoyed in its historical context.
