

Iterations for a Participatory Envirostructure

• major problem in the environmental design field has been the lack of any means of describing and formalizing communicating the conceptual aspects of the physical environment.

[illegible][illegible]

psychological processes over time. That is moving against the current of a long-standing tradition in western design theory and the work may well help transition design thinking producing designs more accommodating to the users of these spaces." —Harry Nefz, Professor of Psychology, Clemson University

The paper is critical (how to look at the environment as an experience, from ground level), as meaning, creative thing, rather than from above as most planners and administrators are wont to do. However, this offers us a way to do this practically, with a mode of notation and a body of theory which are closer to music than dance than anything else. Architects will find this not great interest, but to be an art, a means, a photography, a sculpture, and a performance, even with programmes, and these each diagrams. It will be most useful to those who are already ready to move on to thinking creatively, ready to move on to thinking creatively, ready to think about what they find their own contribution to the world, ready to think about their own contribution to the world, ready to think about their own contribution to the world.
