Performance Engineering of Software Systems Connie U. Smith, 1990 *Performance Engineering Of Software Systems* C.U. Smith, **New Approaches in Software Measurement** Reiner Dumke, Alain Abran, 2003-06-29 Software measurement is one of the key technologies employed to control and manage the software development process Research avenues such as the applicability of metrics the efficiency of measurement programs in industry and the theoretical foundations of software engineering have been investigated to evaluate and improve modern software development areas such as object orientation compone based develop ment multimedia systems design reliable telecommunication systems etc In the tradition of our software measurement research communities the German Computer Science Interest GI Group on Software Measurement and the Canadian Interest Group in Software Metrics CIM have attended to these concerns in recent years Initially research initiatives were directed at the definition of new methods of software measurement and the validation of these methods themselves This was then followed by more and more investigation into practical applications of software measurement and key findings in this area of software engineering have been published in Dumke Zuse Theory and Practice of Software Measurement 1994 Ebert Dumke Software Metriken in der Praxis 1996 Lehner Dumke Abran Software Metrics Research and Practice in Software Measurement 1997 Dumke Abran Software Measurement Current Trends in Research and Practice 1999 We would also like to mention that the proceedings of the Lac Sup rieur workshop have been made available on the web at www.lrgl.uqam.ca This new book includes the proceedings of the 10th Workshop on Software Measurement held in Berlin in October 2000 *Petri Nets and Other Models of Concurrency - ICATPN 2006* Susanna Donatelli, P.S. Dumke,2015-03-06 Numerous methods exist to model and analyze the different roles responsibilities and process levels of information technology IT personnel However most methods neglect to account for the rigorous application and evaluation of human errors and their associated risks This book fills that need Modeling

Evaluating and Predicting IT Human Resources Performance explains why it is essential to account for the human factor when determining the various risks in the software engineering process. The book presents an IT human resources evaluation approach that is rooted in existing research and describes how to enhance existing approaches through strict use of software measurement and statistical principles and criteria. Discussing IT human factors from a risk assessment point of view, the book identifies, analyzes, and evaluates the basics of IT human performance. It details the IT human factors required to achieve desired levels of human performance prediction. It also provides a rigorous investigation of existing human factors evaluation methods, including IT expertise and Big Five, in combination with powerful statistical methods such as failure mode and effect analysis (FMEA) and design of experiment (DoE). It supplies an overview of existing methods of human risk evaluation. Provides a detailed analysis of IT role-based human factors using the well-known Big Five method for software engineering. Models the human factor as a risk factor in the software engineering process. Summarizes emerging trends and future directions. In addition to applying well-known human factors methods to software engineering, the book presents three models for analyzing psychological characteristics. It supplies profound analysis of human resources within the various software processes, including development, maintenance, and application, under consideration of the Capability Maturity Model Integration (CMMI) process level five. *IEEE International Computer Performance and Dependability Symposium*, 1996
