When all action items finished the PNF asks, "Clear ECAM"? PF will reply, "Clear ECAM" if ready to continue. Be sure that no further cyan messages remain that can be eliminated before clearing. Some blue action items the computer cannot get feedback from, and these will remain on the screen. **ALWAYS CONFIRM AN ECAM CLEAR.**

If the problem stops while doing action items some action items may clear or change automatically. For example, if an engine fire goes out while running ECAM you will see the ECAM ENGINE FIRE go away, the red FIRE pb on the FIRE panel and the red FIRE light on the engine panel will go out and the LAND ASAP will change from red to orange.

When ECAM is cleared the next procedure will appear (additional primary failures are listed in the "stack" on the right) or if all procedures are done then ECAM will automatically present the first page of the affected systems on the SD. Affected systems (secondary failures) are listed in amber on the top right of the screen with an "asterisk" in front of them ("F/CTL). After reviewing the screen you will clear it and the next system screen will be shown. After each screen you should ask and confirm ready to clear the screen.

Example: PNF will then review all affected equipment shown in amber on Flight Control side. When done PNF will ask, "Clear Flight Control"?

PF will reply, "Clear Flight Control" if ready to continue.

When all the affected system screens have been cleared the status page will come up automatically. If Status or Inop Systems takes up more than one page on ECAM there will be a green down arrow to indicate to "scroll" to the next page. In this case you will clear ECAM to scroll to the rest of the procedure. After using clear to see additional Status or INOP Systems pages you can press the STS key to see the first Status or INOP Systems page again.

PNF will then read all status items line by line. When done the PNF will ask "Clear Status"?

The PF will reply, "Clear Status" if ready to finish.

Additional information on ECAM warnings may be obtained from the Pilots Handbook, Chapter 21 if time permits.

A red LAND ASAP suggests landing at nearest suitable airport (more severe).
An amber LAND ASAP suggests the pilot should consider the seriousness of the situation and suitability of the airport before landing (less severe).

Landing Distance Procedure – If the procedure directs you to do the landing distance procedure (LDG DIST PROC) then you will look in the QRH performance section for the

Aircraft Take-off Performance and Risks for Wet and Contaminated Runways in Canada David C. Biggs, Transportation Development Centre (Canada), 1991 This report documents the results of a study into the risks associated with degraded performance during rejected and continued take off from wet and contaminated runways A comprehensive review of world wide accident and incident data was undertaken to identify the severity of the problem and the factors involved Runway condition characteristics the correlation of runway friction test devices with the friction experienced by aeroplanes and take off performance estimation on wet and contaminated runways were reviewed Performance estimates were examined on the basis of the ratio of contaminated vs dry friction A method is outlined for classifying runway conditions based upon ICAO SARPS FAA NASA trials and the practices of leading countries and airlines The frequency of wet and contaminated runways in Canada the likelihood of critical events on the take off run and the take off weight distribution were determined These frequency and probability distributions and runway weather and aircraft performance data were used in a probabilistic analysis of the risk of take off accidents A number of counter measures were examined including the JAR acceptable means of compliance for wet and contaminated runways
