Characterization and Analysis Robert F. Brady, 2003 This book is a practical manual for those who analyze polymers Self contained chapters describe when a technique should be selected explain its basic principles describe how instruments are constructed and operated and teach how the data obtained relate to molecular structure and physical properties Many clear illustrations are included Implicit memory refers to a change in task performance due to an earlier experience that is not consciously remembered This book is not a research manual but rather a guide to performing and understanding polymer characterization and an introduction to the specialized literature of the analytical chemistry of polymers The techniques covered are directly relevant to the characterization of synthetic polymers such as adhesives sealants polymers composites coatings elastomers rubber and other nonmetallic materials Many techniques are also quite useful for natural and biological polymers

McGrath, 1989 The scope of this book is to give an up to date overview of the field of polyimide research a field which has seen rapid growth and diversification in the last few years as well as a stronger involvement of university laboratories Although synthesis of new materials still plays a major role a number of groups work now on understanding the details of polyimide chemistry structure and properties This is reflected in the papers presented in this book which examine several major aspects of polyimides new materials synthesis cure studies structure property studies studies of mechanical and electrical properties analysis of polyimides interface studies and applications The papers too numerous to list individually are

grouped under the following headings

- 1 New Materials 18 papers includes polyimide blends a new field photosensitive polyimides silicon containing polyimides copolymers bismaleimide resins semi interpenetrating networks
- 2 Synthesis 6 papers includes new synthetic methods polymerization mechanisms and properties of precursor solutions

This book contains a collection of original research papers which were presented in honor of the Bordon Award recipient Professor Eric Baer on the occasion of the 55th Meeting of the American Chemical Society Atlanta Georgia March 1981 The contributors are present or former colleagues and students who have worked with him in the Department of Macromolecular Science at Case Institute of Technology of Case Western Reserve University Throughout his work Eric Baer has attempted to find the relationships of solid state structure and hierarchy to the resultant properties from which specific functions are derived Although he has studied many seemingly unrelated subjects from irreversible deformation mechanics and yield processes in amorphous polymeric solids to structural organization and mechanical function of tendon his unique goal has been to develop models from the real structure that would allow a quantitative description of properties Today this area of microscience is rapidly expanding as new and sophisticated applications of polymeric materials with multifunctional properties are emerging from our understanding and control of the solid state The wide ranging ideas and the originality of Professor Baer's contributions have stimulated many new concepts which are now widely accepted in the field of high polymers The contributions to this volume represent many of the areas which he has explored
