Introduction to λ -trees Ian Chiswell, 2001 The theory of λ trees has its origin in the work of Lyndon on length functions in groups The first definition of an R tree was given by Tits in 1977 The importance of λ trees was established by Morgan and Shalen who showed how to compactify a generalisation of Teichmüller space for a finitely generated group using R trees In that work they were led to define the idea of a λ tree where λ is an arbitrary ordered abelian group Since then there has been much progress in understanding the structure of groups acting on R trees notably Rips theorem on free actions There has also been some progress for certain other ordered abelian groups λ including some interesting connections with model theory Introduction to λ Trees will prove to be useful for mathematicians and research students in algebra and topology Contents λ Trees and Their Construction Isometries of λ Trees Aspects of Group Actions on
