On Being Normal and Other Disorders Paul Verhaeghe, 2020-06-16 The central argument of *On Being Normal and Other Disorders* is that psychic identity is acquired through one's primary intersubjective relationships Thus the diagnosis of potential pathologies must also be founded on this relation Given that the efficacy of all forms of treatment depends upon the therapeutic relation a diagnostic of this sort has wide ranging applications The author's critical evaluation of the contemporary DSM diagnostic shows that the lack of reference to and

governing metapsychology impinges on the therapeutic value of the DSM categories In response to this problem the author sketches out the foundations of such a metapsychology by combining a Freud-Lacanian approach with contemporary empirical research Close attention is paid to the processes of identity acquisition to show how the self and the Other are not two separate entities Rather subject formation is seen as a process in which both the subject's and the Other's identity as well as the relationship between them comes into being

Be Not Anxious Allan Hugh Cole, 2008-10-07 As Allan Cole knows firsthand both personally and pastorally Christians are not immune from anxiety and many believers go to their church leaders for support and solace This helpful book draws on narrative approaches to theology and counseling to suggest how pastoral caregivers may effectively minister to anxious persons *Be Not Anxious* provides pastors and other caregivers with a basic understanding of anxiety including how to identify those suffering from it and how to get at what is making them anxious Cole focuses both on cognitive based methods and on common faith practices church membership frequent worship prayer Bible reading service and confession showing how these may provide relief from anxiety By addressing the roles of both psychiatry and ministry as co liberators from anxiety he leads the pastor and the faith community in helping disquieted souls to find rest

EMDR Therapy Katarina Volkov, In the late 1980s a chance walk through a park would forever change the landscape of trauma therapy Dr Francine Shapiro a psychology student at the time noticed something peculiar during her stroll As disturbing thoughts entered her mind she observed that moving her eyes back and forth seemed to reduce the emotional intensity of these memories This serendipitous moment led to what would become one of the most researched and effective treatments for trauma Eye Movement Desensitization and Reprocessing known simply as EMDR The human brain's capacity to heal itself has long fascinated researchers and clinicians alike Throughout history various therapeutic approaches have emerged each attempting to unlock the mysteries of psychological healing From Freud's psychoanalysis to Beck's cognitive behavioral therapy the field has continuously evolved Yet none of these approaches quite captured the elegant simplicity and remarkable effectiveness that EMDR would demonstrate in treating traumatic memories What makes EMDR particularly revolutionary is its departure from traditional talk therapy models Rather than requiring clients to extensively verbalize their trauma or engage in prolonged exposure to traumatic memories EMDR works with the brain's natural information processing system This approach recognizes that trauma often becomes stuck in the nervous system creating symptoms that persist long after the actual danger has passed
