General Equilibrium with Price-Making Firms T. Marschak,R. Selten,2012-12-06 Motivation That elegant fiction the competitive equilibrium seems still to dominate the frontiers of theoretical microeconomics We may think of it in a general way as a state of affairs wherein economic agents responding rationally to announced prices make choices which are consistent and feasible The prices may also be described as taken for one reason or another the agents who respond to them consider them as given The existence of such a state its optimality its robustness against free bargaining among agents when there are many of them its Wliqueness its stability when price displacements evoke specified adjustments all these issues have been studied and continue to be studied in a variety of settings Slowly the equilibrium investigated begins to incorporate public goods externalities of certain kinds differences in agents information and infinitely many time periods The appeal of such results need not be belabored the equilibrium studied may sustain an optimal resource allocation and when it does it sustains it in a manner that appears to be informationally efficient and to accord well with individual incentives Therefore it is important to extend the circumstances under which an equilibrium exists under which it sustains optimality and under which it survives displacements as well as free bargaining among agents **The Southwestern Reporter** ,1921
