Mathematics and Education in an AI Era Dragana Martinovic, Marcel Danesi, 2025-04-25. This book focuses on the potential contributions of Artificial Intelligence (AI) for enhancing mathematics education. It includes rationales for an AI-oriented pedagogical model such as interdisciplinarity and even sensitivity to crucial world issues such as climate change. The chapters in this book highlight what the new age of mathematics education entails, concretely covering themes from the utilization of AI directly into classroom pedagogy and the semiotic consequences of what this entails to how mathematics training can be tailored to get students to relate concretely to problems of climate change and to understand the relevance of the differences between symmetry and asymmetry as psychological constructs. The overall picture we can glean from these chapters is not mere eclecticism but an integration of disciplinary perspectives into a holistic framework that has great relevance and resonance for mathematics education in the age of AI. **The Next New** Pranjal Sharma, 2023-05-26.
