A smart home is programmed to act autonomously to improve comfort levels, save energy, and potentially ensure safety. The result is a better way of life. Innovative solutions continue to be developed by researchers and engineers, and thus smart home technologies are constantly evolving. By the same token, cybercrime is also becoming more prevalent. Indeed, a smart home system is made up of connected devices that cybercriminals can infiltrate to access private information, commit cyber vandalism, or infect devices using botnets. This book addresses cyber attacks such as sniffing, port scanning, address spoofing, session hijacking, ransomware, and denial of service. It presents, analyzes, and discusses the various aspects of cybersecurity as well as solutions proposed by the research community to counter the risks. *Cybersecurity in Smart Homes* is intended for people who wish to understand the architectures, protocols, and different technologies used in smart homes.
