Crystallography, Volume F Eddy Arnold,Daniel M. Himmel,Michael G. Rossmann,2012-03-05 International Tables for
 Crystallography Volume F is an expert guide to macromolecular crystallography for the structural biologist It was
 commissioned by the International Union of Crystallography in recognition of the extraordinary contributions that knowledge
 of macromolecular structure has made and will make to the analysis of biological systems from enzyme catalysis to the
 workings of a whole cell The volume covers all stages of a crystallographic analysis from the preparation of recombinant
 proteins through crystallization diffraction data collection phase determination structure validation and structure analysis
 Although the volume is written for experienced scientists it is recognized that the reader is more likely to be a biologist
 interested in structure than a classical crystallographer interested in biology Thus there are chapters on the fundamentals
 history and current perspectives of macromolecular crystallography as well as on useful programs and databases such as the
 Protein Data Bank Each chapter is written by one or more internationally recognized experts This second edition features 19
 new articles and many articles from the first edition have been revised The new articles cover topics such as standard
 definitions for quality indicators expression of membrane proteins protein engineering high throughput crystallography
 radiation damage merohedral twinning low resolution ab initio phasing robotic crystal loading whole cell X ray diffraction
 imaging and halogen interactions in biological crystal structures There are also new articles on relevant software including
 software for electron microscopy These enhancements will ensure that Volume F continues to be a key reference for
 macromolecular crystallographers and structural biologists More information on the series can be found at <http://it.iucr.org>
