The NIH Record ,2000 *Data Networks, IP and the Internet* Martin P. Clark,2003-05-07 Data Networking is a capability that allows users to combine separate data bases telecommunication systems and specialised computer operations into a single integrated system so that data communication can be handled as easily as voice messages Data communications is the problem of getting information from one place to another reliably secure both from channel disruptions and deliberate interference while conforming to user requirements IP Internet protocol is the central pillar of the Internet and was designed primarily for internetworking as being a simple protocol almost any network could carry The business world appears to increasingly revolve around data communications and the Internet and all modern data networks are based around either the Internet or at least around IP Internet Protocol

based networks However many people still remain baffled by multiprotocol networks how do all the protocols fit together How do I build a network What sort of problems should I expect This volume is intended not only for network designers and practitioners who for too long have been baffled by the complex jargon of data networks but also for the newcomer eager to put the plethora of protocols into context After the initial boom the rate of IP development is now beginning to stabilise making a standard textbook and reference book worthwhile with a longer shelf life Highly illustrated and written in an accessible style this book is intended to provide a complete foundation textbook and reference of modern IP based data networking avoiding explanation of defunct principles that litter other books Network IP engineers Network operators engineering managers and senior undergraduate students will all find this invaluable

CLOUD AND INTERNET

SECURITY Binh Nguyen, A while back I wrote two documents called Building a Cloud Service and the Convergence Report They basically documented my past experiences and detailed some of the issues that a cloud company may face as it is being built and run Based on what had transpired since a lot of the concepts mentioned in that particular document are becoming widely adopted and or are trending towards them This is a continuation of that particular document and will attempt to analyse the issues that are faced as we move towards the cloud especially with regards to security Once again we will use past experience research as well as current events trends in order to write this particular report Personal experience indicates that keeping track of everything and updating large scale documents is difficult and depending on the system you use extremely cumbersome The other thing readers have to realise is that a lot of the time even if the writer wants to write the most detailed book ever written it s quite simply not possible Several of my past works something such as this particular document takes a few weeks to a few months to write depending on how much spare time I have were written in my spare time and between work and getting an education If I had done a more complete job they would have taken years to write and by the time I had completed the work updates in the outer world would have meant that the work would have meant that at least some of the content would have been out of date Dare I say it by the time that I have completed this report itself some of the content may have come to fruition as was the case with many of the technologies with the other documents I very much see this document as a starting point rather than a complete reference for those who are interested in technology security Note that the information contained in this document is not considered to be correct nor the only way in which to do things It s a mere guide to how the way things are and how we can improve on them Like my previous work it should be considered a work in progress Also note that this document has gone through many revisions and drafts may have gone out over time As such there will be concepts that may have been picked up and adopted by some organisations while others may have simply broken cover while this document was being drafted and sent out for comment It also has a more strategic business slant when compared to the original document which was more technically orientated No illicit activity as far as I know and have researched was conducted during the formulation of this particular document All information was obtained
