Textual Intelligence Meenakshi Malik, Preeti Sharma, Susheela Hooda, 2025-07-23 The book is a must have resource for anyone looking to understand the complexities of generative AI offering comprehensive insights into LLMs effective training strategies and practical applications Textual Intelligence Large Language Models and Their Real World Applications provides an overview of generative AI and its multifaceted applications as well as the significance and potential of Large Language Models LLMs including GPT and LLaMA It addresses the generative AI project lifecycle challenges in existing data architectures proposed use case planning and scope definition model deployment and application integration Training LLMs data requirements for effective LLM training pre training and fine tuning processes and navigating computational resources and infrastructure are also discussed The volume delves into in context learning and prompt engineering offering strategies for crafting effective prompts techniques for controlling model behavior and output quality and best practices for prompt engineering Textual Intelligence Large Language Models and Their Real World

Applications also discusses cost optimization strategies for LLM training aligning models to human values optimizing model architectures the power of transfer learning and fine tuning instruction fine tuning for precision and parameter efficient fine tuning PEFT with adapters such as LoRA QLoRA and soft prompts making it an essential guide for both beginners and industry veterans Readers will find this book Explores the real world potential of large language models Introduces industry changing AI solutions Provides advanced insights on AI and its models Audience Industry professionals academics graduate students and researchers seeking real world solutions using generative AI

Law and Economics of Justice Klaus Mathis, Avishalom Tor, 2024-04-30 While previous volumes have examined specific issues and developments such as the coronavirus crisis or digital transformation from a law and economics perspective the anniversary edition returns to the methodological and philosophical fundament of the discipline of law and economics The present book aims to examine these foundations in general and in particular efficiency reciprocity and meritocracy and their relation to law and justice from an interdisciplinary perspective Efficiency Traditionally the economic analysis of law has been guided by the goal of efficiency Economists usually define efficiency as Pareto or Kaldor Hicks efficiency Any change that makes one member of society better off without anyone else being worse off is a Pareto improvement A change is a Kaldor Hicks improvement if the gainers value their gains more than the losers value their losses with only hypothetical compensation required Reciprocity Economists have traditionally based their models on the self interest hypothesis of homo oeconomicus In this model an individual maximises his own utility without being altruistic or jealous Behavioural economics challenges the self interest hypothesis In fact many people deviate from purely self interested behaviour There are also signs that considerations of fairness and mutual benefit are important in bilateral negotiations and in the functioning of markets Meritocracy The concept of meritocracy refers to a system organisation or society in which people are selected and promoted to positions of success power and influence on the basis of their abilities and merits This means that an individual is able to climb the social ladder through hard work Moreover meritocracy directs the most talented people into the most functionally important positions thereby increasing a society's efficiency However the equalising function of meritocracy has been criticised Rather than reducing inequality meritocracy is seen as the cause of racial economic and social inequality

Deep Generative Models for Integrative

Analysis of Alzheimer's Biomarkers Kumar, Abhishek, Kumar, S. Rakesh, Gayathri, N., Srivel, R., C., Dhaya, 2024-11-01 The integration of generative AI and deep learning techniques for Alzheimer's disease detection significantly impacts the research community by advancing diagnostic accuracy and providing a comprehensive understanding of the disease. By combining multiple data modalities including imaging, genetics, and clinical data, researchers can improve diagnostic precision and develop personalized treatment strategies. Generative AI facilitates efficient data utilization through dataset augmentation, fostering innovation and collaboration across interdisciplinary fields. These methodologies forward the exploration of new diagnostic tools while expediting their application in clinical practice, benefiting patients through early detection and intervention. The incorporation of generative AI may enhance research capabilities, promote collaboration, and improve Alzheimer's disease management and patient outcomes. **Deep Generative Models for Integrative Analysis of Alzheimer's Biomarkers** explores the integration of deep generative models in disease diagnosis, biomarking, and prediction. It examines the use of tools like data analysis, natural language processing, and machine learning for effective Alzheimer's research. This book covers topics such as data analysis, biomedicine, and machine learning and is a useful resource for computer engineers, biologists, scientists, medical professionals, healthcare workers, academicians, and researchers. **Edtech for Multilingual Learners** Brent Warner, 2025 This friendly, accessible book offers dozens of creative activities to help teachers use edtech tools to engage their students in the language learning process. Many teachers of multilingual students could improve learning outcomes through the use of education technology but don't have time for in-depth professional development that would help them in their work in this area. This book fills that gap, offering guidance and inspiration to teachers of English as a Second or Other Language (ESOL) as well as to educators in other disciplines who work with multilingual learners. Organized by six key language acquisition skills: reading, writing, speaking, listening, vocabulary, and pronunciation, each chapter features eight to twelve activities to engage students and facilitate language learning. The activities are tech-driven yet flexible enough to adapt to the needs of different classroom settings. While some specific tools are discussed, the book shows teachers how to make the activities work with the technology they have available. The book includes links to ready-to-use slide decks for every activity. Offers a knowledgeable and thoughtful introduction to using AI with language learners. Features a backward design pedagogical approach in which each activity has an end goal in mind and is then developed to incorporate appropriate and effective tools. Is accompanied by the ELT Toolkit, a searchable online database of edtech tools for English language teachers hosted by TESOL International Association. Includes connections to the ISTE Standards in every chapter. Based on research-backed practices, this book's fun and practical approach will help busy teachers leverage technology to make the language learning process more fun and effective for their students. Audience: Secondary and higher ed TESOL educators and teachers working with ESL students. Fentanyl Jake Braun, 2025-10-30 Fentanyl is a first-person insider account of how the crisis consumed the Biden Administration amid a series of other national

security emergencies It follows Jake Braun a senior White House official and his colleagues while they scramble to respond to the epidemic As Mexican cartels ruthlessly executed their most radical transformation in 50 years Braun and his colleagues architected the first U S government wide strategy to combat fentanyl in history The effort brought him to Mexico to meet with Mexican agents who kick down cartel doors for the U S government there He also spent time with data analytics wizards buried in nondescript offices in Virginia suburbs that hunt down Chinese fentanyl precursor chemicals on the Dark Web He even takes a detour to gather intelligence from Russian migrants in U S detention facilities that migrated through cartel controlled areas of Mexico In the process Braun uncovered the remarkable transformation cartels in Mexico underwent over the last 50 years They morphed from narco empires the size of Fortune 50 companies specializing in marijuana and cocaine to ones specializing in human migration and separately fentanyl After much painstaking effort the Biden Administration successfully executed the most sweeping takedown of cartel leadership and fentanyl infrastructure since the crisis began Due to the efforts of heroic agents intelligence officers and national security experts the leviathan U S government is now marshaled in ways never before imagined against the Chinese chemical companies and cartels propagating the fentanyl epidemic Further the strategy seems to be working Just a year after it was kicked off the fentanyl fatalities dropped nearly 37% Yet the crisis persists Finally Braun draws on his unique experience combating the epidemic to outline how the U S government can once and for all end the fentanyl crisis in America
