Measures Of Health Literacy Workshop Summary:

Measures of Health Literacy Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2009-12-30 Health literacy the ability for individuals to obtain process and understand basic health information and services to facilitate appropriate health decisions is increasingly recognized as an important facet of health care and health outcomes Although research on health literacy has grown tremendously in the past decade there is no widely agreed upon framework for health literacy as a determinant of health outcomes Most instruments focus on assessing an individual's health literacy yet the scope of health literacy reaches far beyond an individual's skills and abilities Health literacy occurs in the context of the health care system and therefore measures of health literacy must also assess the demands and complexities of the health care systems with which patients interact For example measures are needed to determine how well the system has been organized so that it can be navigated by individuals with different levels of health literacy and how well health organizations are doing at making health information understandable and actionable To examine what is known about measures of health literacy the Institute of Medicine convened a workshop The workshop summarized in this volume reviews the current status of measures of health literacy including those used in the health care setting discusses possible surrogate measures that might be used to assess health literacy and explores ways in which health literacy measures can be used to assess patient centered approaches to care

Institute of Medicine released *Health Literacy: A Prescription to End Confusion* a report on the then underappreciated challenge of enabling patients to comprehend their condition and treatment to make the best decisions for their care and to take the right medications at the right time in the intended dose. That report documented the problems, origins and consequences of the fact that tens of millions of U.S. adults are unable to read complex texts including many health-related materials and it proposed possible solutions to those problems. To commemorate the anniversary of the release of the 2004 health literacy report, the Institute of Medicine's Roundtable on Health Literacy convened a 1-day public workshop to assess the progress made in the field of health literacy over the past decade, the current state of the field and the future of health literacy at the local, national and international levels. *Health Literacy: Past, Present and Future* summarizes the presentation and discussion of the workshop.

Capturing Social and Behavioral Domains and Measures in Electronic Health Records Institute of Medicine, Board on Population Health and Public Health Practice, Committee on the Recommended Social and Behavioral Domains and Measures for Electronic Health Records, 2015-01-08. Determinants of health like physical activity levels and living conditions have traditionally been the concern of public health and have not been linked closely to clinical practice. However, if standardized social and behavioral data can be incorporated into patient electronic health records (EHRs), those data can provide crucial information about factors that influence health and the effectiveness of treatment. Such information is useful for diagnosis, treatment choices, policy, health care system design and innovations to improve health outcomes and reduce health care costs. *Capturing Social and Behavioral Domains and Measures in Electronic Health Records: Phase 2* identifies domains and measures that capture the social determinants of health to inform the development of recommendations for the meaningful use of EHRs. This report is the second part of a two-part study. The Phase 1 report identified 17 domains for inclusion in EHRs. This report pinpoints 12 measures related to 11 of the initial domains and considers the implications of incorporating them into all EHRs. This book includes three chapters from the Phase 1 report in addition to the new Phase 2 material. Standardized use of EHRs that include social and behavioral domains could provide better patient care, improve population health and enable more informative research. The recommendations of *Capturing Social and Behavioral Domains and Measures in Electronic Health Records: Phase 2* will provide valuable information on which to base problem identification, clinical diagnoses, patient treatment outcomes assessment and population health measurement.

Promoting Health Literacy to Encourage Prevention and Wellness Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2011-12-01. Health literacy has been shown to affect health outcomes. The use of preventive services improves health and prevents costly health care expenditures. Several studies have found that health literacy makes a difference in the extent to which populations use preventive services. On September 15, 2009, the Institute of Medicine Roundtable on Health Literacy held a workshop to explore approaches to integrate health literacy into primary and secondary prevention. *Promoting Health Literacy to*

Encourage Prevention and Wellness serves as a factual account of the discussion that took place at the workshop. The report describes the inclusion of health literacy into public health prevention programs at the national state and local levels, reviews how insurance companies factor health literacy into their prevention programs, and discusses industry contributions to providing health literate primary and secondary prevention.

Health Literacy and Numeracy, 2014 *Health Literacy and Numeracy* Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2014-07-17. Although health literacy is commonly defined as an individual trait, it does not depend on the skills of individuals alone. Health literacy is the product of the interaction between individuals' capacities and the health literacy related demands and complexities of the health care system. Specifically, the ability to understand, evaluate, and use numbers is important to making informed health care choices.

Health Literacy and Numeracy is the summary of a workshop convened by The Institute of Medicine Roundtable on Health Literacy in July 2013 to discuss topics related to numeracy, including the effects of ill health on cognitive capacity, issues with communication of health information to the public, and communicating numeric information for decision making. This report includes a paper commissioned by the Roundtable, Numeracy and the Affordable Care Act: Opportunities and Challenges, that discusses research findings about people's numeracy skill levels, the kinds of numeracy skills that are needed to select a health plan, choose treatments, and understand medication instructions, and how providers should communicate with those with low numeracy skills. The paper was featured in the workshop and served as the basis of discussion.
