The Routledge Handbook of Media Use and Well-Being Leonard Reinecke, Mary Beth Oliver, 2016-06-23. The Routledge Handbook of Media Use and Well-Being serves as the first international review of the current state of this fast-developing area of research. The volume provides a multifaceted perspective on the beneficial as well as the detrimental effects of media exposure on psychological health and well-being. As a first mover, it will define the field of media use and well-being and provide an essential resource for research and teaching in this area. The volume is structured along four central considerations:

- Processes** presents concepts that provide a theoretical bridge between media use and well-being such as psychological need satisfaction, recovery from stress and strain, self-presentation, and self-enhancement or parasocial interactions with media characters, providing a comprehensive understanding of the underlying processes that drive psychological health and well-being through media.
- Moderators** examines both risk factors that promote negative effects on well-being and protective factors that foster positive media effects.
- Contexts** bridges the gap between theory and real life by illustrating how media use can influence well-being and satisfaction in very different life domains covering the full spectrum of everyday life by addressing the public, private, and work spheres.
- Audiences** takes a look at the influence of life phases and life situations on the interplay of media use and well-being, questioning whether various user groups differ with regard to the effects of media exposure.

Bringing together the expertise of outstanding international scholars from multiple disciplines including communication, media psychology, social psychology, clinical psychology, and media education, this handbook sheds new light on the role of media in influencing and affecting emotions.

Responding To the Screen Jennings Bryant, Dolf Zillmann, 2013-11-05. This volume takes the next step in the evolution of mass communication research tradition from effects to processes, a more detailed and microanalytical analysis of the psychological processes involved in receiving and reacting to electronic media messages. This domain includes investigations into those psychological processes that occur between the process of selecting media messages for consumption and assessments of whatever processes mediate the long-term impact such message consumption may have on consumers' subsequent behavior. The editors strive to further understanding of some of the basic processes underlying the ways we gain entertainment and information.
