Also included are drawings of the mechanical components of the apparatus and listings of two computer programs. Additional necessary parts include a computer instrumentation, two piezoelectric stacks and an appropriate platform equipped with a microscope. Piezoelectric stacks are used as actuators. Noncontacting eddy current displacement sensors measure both the tensile displacement and the force. Closed loop feedback control allows a variety of test programs. The maximum available displacement is about 50 μm and the maximum available force is about 0.3 N. The resolution of displacement is about 25 nm and the resolution of force is about 100 μN . Cyclic loading has been demonstrated for cycles as short as 20 s. Manual on Industrial Water American Society for Testing Materials.
