Biophysics of Molecular Chaperones Sebastian Hiller, Maili Liu, Lichun He, 2023-11-01 Molecular chaperones are critical to control protein quality in all living cells Understanding chaperone function at the atomic level and in particular its mode of interaction with client proteins is crucial to understanding the fundamental roles chaperones play in biology This book fills a gap in the literature by comprehensively summarizing and discussing new advanced experimental techniques for their analysis Providing a comprehensive overview of advanced biophysical methods for the characterization of molecular mechanisms of molecular chaperones the majority of the contributions are NMR methodology This is the method of choice for atomic resolution studies of such systems Additional notable biophysical approaches are considered to present all relevant current developments in exploring chaperone function and the transient and dynamic interactions with their client proteins The book is targeted at both current practitioners of structural biology and biophysical chemistry and scientists who are interested in entering the field It could be useful for graduate students as supplementary reading **The Hsp70 Molecular Chaperone Machines** Matthias P. Mayer, Pierre Goloubinoff, 2017-03-24 Members of the HSP70 family form a central hub of the molecular chaperone network controlling protein homeostasis in prokaryotes and in the ATP containing compartments of the eukaryotic cells The heat inducible form HSPA1A HSP70 its constitutive cytosolic cognate HSPA8 Hsc70 its endoplasmic reticulum form HSPA5 BiP and its mitochondrial form HSPA9 Mortalin as well as the more distantly related HSPHs HSP110s make up 1-2 % of the total mass of proteins in human cells They use the energy of ATP hydrolysis to prevent and forcefully revert the process of protein misfolding and aggregation during and following various stresses presumably by working as unfoldases to lift aberrant conformers out of kinetic traps As such HSP70s in cooperation with their J domain co chaperones and nucleotide exchange factors NEFs and co disaggregases form an efficient network of cellular defenses against the accumulation of cytotoxic misfolded protein conformers which may cause degenerative diseases such as Parkinson's and

Alzheimer's disease, diabetes, and aging in general. In addition to their function in repair of stress-induced damage, HSP70s fulfill many housekeeping functions including assisting the de novo folding and maturation of proteins, driving the translocation of protein precursors across narrow membrane pores into organelles, and by controlling the oligomeric state of key regulator protein complexes involved in signal transduction and vesicular trafficking. For reasons not well understood, HSP70s are also found on the surface of some animal cells, in particular cancer cells, where they may serve as specific targets for cancer immunotherapy. Here we gathered seven mini reviews, each presenting a complementary aspect of HSP70 structure and function in bacteria and eukaryotes under physiological and stressful conditions. These articles highlight how the various members of this conserved family of molecular chaperones, assisted by their various J domain and NEF cochaperones and co-disaggregases, harness ATP hydrolysis to perform a great diversity of life-sustaining cellular functions using a similar molecular mechanism.

Protein Folding Dynamics and Stability Prakash Saudagar, Timir Tripathi, 2023-05-27. This book describes recent important advancements in protein folding dynamics and stability research, as well as explaining fundamentals and examining potential methodological approaches in protein science. In vitro, in silico, and in vivo method-based research of how the stability and folding of proteins help regulate the cellular dynamics and impact cell function that are crucial in explaining various physiological and pathological processes. This book offers a comprehensive coverage on various techniques and related recent developments in the experimental and computational methods of protein folding dynamics and stability studies. The book is also structured in such a way as to summarize the latest developments in the field and key concepts to ensure that readers can understand advanced concepts as well as the fundamental big picture. And most of all, fresh insights are provided into the convergence of protein science and technology. **Protein Folding Dynamics and Stability** is an ideal guide to the field that will be of value for all levels of researchers and advanced graduate students with training in biochemical laboratory research.

Molecular Chaperones and Neurodegeneration Cintia Roodveldt, Tiago F. Outeiro, Janice E. Braun, 2017-12-06. Molecular chaperones or heat shock proteins (HSPs) play essential roles in safeguarding structural stability and preventing misfolding and aggregation of proteins and maintaining the proteome functionality in the cell. For over two decades until the present time, new functions have been discovered and several molecular mechanisms have been elucidated for many chaperones, while the field is being continuously challenged by new open questions. Probably as a consequence of the increasing research on the molecular bases of neurodegenerative diseases and the realisation that many such disorders are linked to protein misfolding processes, unleashing the roles and mechanisms of chaperones in the context of neurodegeneration has become a prime scientific goal. This e-book contains a diversity of reviews, perspective, and original research articles highlighting the importance and potential of this emerging subject.

across a variety of biological membranes In addressing this topic this volume includes several new twists not previously addressed in the literature In the last few years the study of protein translocation has been revolutionized by the availability of structural information on many of the components and complexes involved in the process Unlike earlier books written on protein translocation this volume considers these advances In addition several chapters discuss facets of protein translocation from a systems biology perspective considered by many to be the next paradigm for biological study Readers of this book will come away with a deeper understanding of the problems facing researchers of protein translocation and see how the most modern biological techniques and approaches are being recruited to answer those questions The chapters are also written such that problems awaiting future investigation are clearly presented **Chaperones** Stuart K.

Calderwood, Thomas L. Prince, 2023-08-04 This second edition volume expands on the previous edition with new discussions on the latest techniques used to study molecular chaperones and the stress response The chapters in this book cover such as analysis of the initiation and regulation of the stress response the role of heat shock protein 90 Hsp90 in gene expression through chromosome immunoprecipitation features of chaperone function and biology the emerging role of the extracellular HSPs and the use of chaperones as biomarkers Written in the highly successful Methods in Molecular Biology series format chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Cutting edge and thorough Chaperones Methods and Protocols Second Edition is a valuable resource for all researchers who want to learn more about this interesting and developing field Molecular Biology of the Cell ,2006 MBC online publishes papers that describe and interpret results of original research concerning the molecular aspects of cell structure and function **Strategies for**
