to a complete infrastructure of state of the art hard and software This infrastructure includes components which might be too expensive for an ordinary research environment such as servers with up to 64 cores and 2 TB main memory The offerings address researchers particularly from but not limited to the areas of computer science and business information systems Main areas of research include cloud computing parallelization and In Memory technologies This technical report presents results of research projects executed in 2018 Selected projects have presented their results on April 17th and November 14th 2017 at the Future SOC Lab Day events

Artificial Intelligence in Healthcare Daniele Cafolla, Timothy Rittman, Hao Ni, 2025-08-19 The two volume set constitutes the proceedings of the Second International Conference on Artificial Intelligence in Healthcare AliH 2025 which took place in Cambridge UK in September 2025 The 60 full papers included in this book were carefully reviewed and selected from 83 submissions They were organized in topical sections as follows Health informatics Personalised Healthcare Robotics Assisted Living Technology Computational Medicine Long term Health Conditions Maternity and Women s Health and Wellbeing

The Deep Learning Architect's Handbook Ee Kin Chin, 2023-12-29 Harness the power of deep learning to drive productivity and efficiency using this practical guide covering techniques and best practices for the entire deep learning life cycle Key Features Interpret your models decision making process ensuring transparency and trust in your AI powered solutions Gain hands on experience in every step of the deep learning life cycle Explore case studies and solutions for deploying DL models while addressing scalability data drift and ethical considerations Purchase of the print or Kindle book includes a free PDF eBook Book Description Deep learning enables previously unattainable feats in automation but extracting real world business value from it is a daunting task This book will teach you how to build complex deep learning models and gain intuition for structuring your data to accomplish your deep learning objectives This deep learning book explores every aspect of the deep learning life cycle from planning and data preparation to model deployment and governance using real world scenarios that will take you through creating deploying and managing advanced solutions You ll also learn how to work with image audio text and video data using deep learning architectures as well as optimize and evaluate your deep learning models objectively to address issues such as bias fairness adversarial attacks and model transparency As you progress you ll harness the power of AI platforms to streamline the deep learning life cycle and leverage Python libraries and frameworks such as PyTorch ONNX Catalyst MLFlow Captum Nvidia Triton Prometheus and Grafana to execute efficient deep learning architectures optimize model performance and streamline the deployment processes You ll also discover the transformative potential of large language models LLMs for a wide array of applications By the end of this book you ll have mastered deep learning techniques to unlock its full potential for your endeavors What you will learn Use neural architecture search NAS to automate the design of artificial neural networks ANNs Implement recurrent neural networks RNNs convolutional neural networks CNNs BERT transformers and more to build your model Deal with multi modal data drift in a production environment Evaluate the quality and bias of your

models Explore techniques to protect your model from adversarial attacks Get to grips with deploying a model with DataRobot AutoML Who this book is for This book is for deep learning practitioners data scientists and machine learning developers who want to explore deep learning architectures to solve complex business problems Professionals in the broader deep learning and AI space will also benefit from the insights provided applicable across a variety of business use cases Working knowledge of Python programming and a basic understanding of deep learning techniques is needed to get started with this book *Security, Privacy, and Applied Cryptography Engineering* Rajat Subhra Chakraborty, Peter Schwabe, Jon Solworth, 2015-09-24 This book constitutes the refereed proceedings of the 5th International Conference on Security Privacy and Applied Cryptography Engineering SPACE 2015 held in Jaipur India in October 2015 The 17 full papers presented in this volume were carefully reviewed and selected from 57 submissions The book also contains 4 invited talks in full paper length The papers are devoted to various aspects of security privacy applied cryptography and cryptographic engineering

Machine Learning for Adaptive Many-Core Machines - A Practical Approach Noel Lopes, Bernardete Ribeiro, 2014-06-28 The overwhelming data produced everyday and the increasing performance and cost requirements of applications are transversal to a wide range of activities in society from science to industry In particular the magnitude and complexity of the tasks that Machine Learning ML algorithms have to solve are driving the need to devise adaptive many core machines that scale well with the volume of data or in other words can handle Big Data This book gives a concise view on how to extend the applicability of well known ML algorithms in Graphics Processing Unit GPU with data scalability in mind It presents a series of new techniques to enhance scale and distribute data in a Big Learning framework It is not intended to be a comprehensive survey of the state of the art of the whole field of machine learning for Big Data Its purpose is less ambitious and more practical to explain and illustrate existing and novel GPU based ML algorithms not viewed as a universal solution for the Big Data challenges but rather as part of the answer which may require the use of different strategies coupled together

High-Performance Big Data Computing Dhabaleswar K. Panda, Xiaoyi Lu, Dipti Shankar, 2022-08-02 An in depth overview of an emerging field that brings together high performance computing big data processing and deep learning Over the last decade the exponential explosion of data known as big data has changed the way we understand and harness the power of data The emerging field of high performance big data computing which brings together high performance computing HPC big data processing and deep learning aims to meet the challenges posed by large scale data processing This book offers an in depth overview of high performance big data computing and the associated technical issues approaches and solutions The book covers basic concepts and necessary background knowledge including data processing frameworks storage systems and hardware capabilities offers a detailed discussion of technical issues in accelerating big data computing in terms of computation communication memory and storage codesign workload characterization and benchmarking and system deployment and management and surveys benchmarks and workloads for evaluating big data middleware systems It

presents a detailed discussion of big data computing systems and applications with high performance networking computing and storage technologies including state of the art designs for data processing and storage systems Finally the book considers some advanced research topics in high performance big data computing including designing high performance deep learning over big data DLoBD stacks and HPC cloud technologies

Extended Reality Lucio Tommaso De Paolis,Pasquale Arpaia,Marco Sacco,2022-08-25 This two volume proceedings LNCS 13445 and 13446 constitutes the refereed proceedings of the First International Conference on Extended Reality XR Salento 2022 held in Lecce Italy during July 6 8 2022 Due to COVID 19 pandemic the conference was held as a hybrid conference The 42 full and 16 short papers were carefully reviewed and selected from 84 submissions The papers discuss key issues approaches ideas open problems innovative applications and trends in virtual reality augmented reality mixed reality applications in cultural heritage in medicine in education and in industry

Big Data Analytics Ulrich Matter,2023-09-04 Successfully navigating the data driven economy presupposes a certain understanding of the technologies and methods to gain insights from Big Data This book aims to help data science practitioners to successfully manage the transition to Big Data Building on familiar content from applied econometrics and business analytics this book introduces the reader to the basic concepts of Big Data Analytics The focus of the book is on how to productively apply econometric and machine learning techniques with large complex data sets as well as on all the steps involved before analysing the data data storage data import data preparation The book combines conceptual and theoretical material with the practical application of the concepts using R and SQL The reader will thus acquire the skills to analyse large data sets both locally and in the cloud Various code examples and tutorials focused on

empirical economic and business research illustrate practical techniques to handle and analyse Big Data Key Features Includes many code examples in R and SQL with R SQL scripts freely provided online Extensive use of real datasets from empirical economic research and business analytics with data files freely provided online Leads students and practitioners to think critically about where the bottlenecks are in practical data analysis tasks with large data sets and how to address them The book is a valuable resource for data science practitioners graduate students and researchers who aim to gain insights from big data in the context of research questions in business economics and the social sciences

Innovative Research and Applications in Next-Generation High Performance Computing Hassan, Qusay F.,2016-07-05 High performance computing HPC describes the use of connected computing units to perform complex tasks It relies on parallelization techniques and algorithms to synchronize these disparate units in order to perform faster than a single processor could alone Used in industries from medicine and research to military and higher education this method of computing allows for users to complete complex data intensive tasks This field has undergone many changes over the past decade and will continue to grow in popularity in the coming years Innovative Research Applications in Next Generation High Performance Computing aims to address the future challenges advances and applications of HPC and related technologies As the need for such processors increases so does the importance of developing new ways to optimize the performance of these supercomputers This timely publication provides comprehensive information for researchers students in ICT program developers military and government organizations and business professionals
