fields to gain comprehensive knowledge and succeed in your chosen industry , *The Smart City - how smart can 'IT' be?* Malin Granath, 2016-08-30 Cities are facing many challenges linked to world wide trends like urbanisation climate changes and globalisation In parallel to these trends we have seen a rapid digitalisation in and of different parts of society Cities and local governments have been appointed an important role in overcoming these world wide challenges and subsequently in policy practices digitalisation is perceived as an important dimension in delivering better and sustainable services to its citizens As a result the smart city has emerged as a concept and approach to contemporary urban planning and development There is still no common understanding of the concept and what components and dimensions it covers However in all definitions digitalisation constitutes one dimension but the role and function of it is still not clear In this study I have examined how different stakeholders talk about digitalisation in policy and planning practices of urban development The aim has been to identify and analyse different repertoires of discourses on digitalisation to advance our knowledge on how goals related to the smart city and digitalisation are put into practice The results are based on a qualitative and interpretative case study with a social constructionist approach An analytical framework based on discourse analysis stakeholder theory and new institutional theory has been constructed to analyse the case Main results show that repertoires on digitalisation are limited in both policy and planning of urban development In these practices digitalisation is primarily seen as a means or as a communication infrastructure in relation to two city services functions i e services related to governance and to environment Results also show that practices of urban planning and development are institutionalised where different stakeholders salience and stakes in urban development and in digitalisation differ but it is clear that digitalisation is a secondary issue Implications of these results are that the taken for granted discourses in policy and planning practices of urban development limit both practice and research when developing a smart city

contemporary design concepts and illustrates them with plans and photographs of outstanding examples Current planning
and design modes of dwellings and neighborhoods are facing challenges of philosophy and form Past approaches no longer

Das Referenzmodell wird im Rahmen eines experimentellen Prototypings unter Einsatz einer Process Engine erprobt. Im Ergebnis wird deutlich, dass die Prozessdigitalisierung Vorteile im Bereich der Systemdokumentation mit sich bringt und als Grundlage für die Entwicklung neuer Standards dienen kann. Der Implementierungsansatz unter Einsatz einer Process Engine wirkt sich positiv auf die Wartbarkeit der Software aus, das Referenzmodell ist mit Einschränkungen übertragbar. Eine Interoperabilität zwischen beteiligten Geräten unterschiedlicher Hersteller wird nicht erreicht. Dazu bedarf es einer bergreifenden Schnittstelle.
