Abstract

The first NAV page is the default NAV page. This page may be quickly selected. NAV page by using the key.

Select the NV option and display the default NV rate, green, and hold.

• **Define NAV page displays a graphic course deviation indicator (CDI) across the top of the page. Unlike the angular limits used on a mechanical CDI coupled to a VOR or ILS receiver, full scale limits for this CDI are defined by a GPs-derived ± 0.3 , 1.0 or 3.0 nm, as indicated at both ends of the CDI. By default, the scale will automatically adjust to the desired limits based upon the current en route flight en route, terminal area or approach. You may also manually select a desired scale setting as outlined on pages 141-143.**

A graphic CDI shows your position at the center of the indicator, relative to desired course (the moving course deviation needle). As with a traditional analog CDI, when you're off course simply steer toward the needle. The CDI arrow in the center of the scale indicates whether you are heading to (up) or from (down) or if you have reached the waypoint (a down arrow).

WFO

The GMC 425 always requires 70% wetweight unless the OEM weight is set (preparing automatic weight adjustment), or you have entered the last component in your third slot.
