Kulkarni, 2009-07-11 This book presents theoretical and application topics in digital signal processing DSP The topics here comprise clever DSP tricks of the trade not covered in traditional DSP textbooks Here we go beyond the standard DSP fundamentals textbook and present new but tried n true clever implementations of digital filter design spectrum analysis signal generation high speed function approximation and various other DSP functions With this book we wished to create a resource that is relevant to the needs of the working DSP engineer by helping bridge the theory to practice gap between introductory DSP textbooks and the esoteric difficult to understand academic journals This book will be useful to experienced DSP engineers due to its gentle tutorial style it will also be of considerable value to the DSP beginner The mathematics used herein is simple algebra and the arithmetic of complex numbers making this material accessible to a wide engineering and scientific audience Fortunately the chapter topics in this book are written in a standalone manner so the subject matter can be read in any desired order DSP for MATLAB and LabVIEW: Fundamentals of discrete signal processing Forester W. Isen, 2008 This book is Volume I of the series DSP for MATLAB TM and LabVIEW TM The entire series consists of four volumes that collectively cover basic digital signal processing in a practical and accessible manner but which nonetheless include all essential foundation mathematics As the series title implies the scripts of which there are more than 200 described in the text and supplied in code form available at www.morganclaypool.com page isen will run on both MATLAB and LabVIEW Volume I consists of four chapters The first chapter gives a brief overview of the field of digital signal processing This is followed by a chapter detailing many useful signals and concepts including convolution recursion difference equations LTI systems etc The third chapter covers

conversion from the continuous to discrete domain and back i.e analog to digital and digital to analog conversion aliasing the Nyquist rate normalized frequency conversion from one sample rate to another waveform generation at various sample rates from stored wave data and Mu law compression The fourth and final chapter of the present volume introduces the reader to many important principles of signal processing including correlation the correlation sequence the Real DFT correlation by convolution matched filtering simple FIR filters and simple IIR filters Chapter 4 in particular provides an intuitive or first principle understanding of how digital filtering and frequency transforms work preparing the reader for Volumes II and III which provide respectively detailed coverage of discrete frequency transforms including the Discrete Time Fourier Transform the Discrete Fourier Transform and the z Transform and digital filter design FIR design using Windowing Frequency Sampling and Optimum Equiripple techniques and Classical IIR design Volume IV the culmination of the series is an introductory treatment of LMS Adaptive Filtering and applications The text for all volumes contains many examples and many useful computational scripts augmented by demonstration scripts and LabVIEW Virtual Instruments VIs that can be run to illustrate various signal processing concepts graphically on the user's computer screen Table of Contents An Overview of DSP Discrete Signals and Concepts Sampling and Binary Representation Transform and Filtering Principles *DSP for MATLABTM and LabVIEWTM* I Forester W.
