Wark creates philosophical tools for the Anthropocene our new planetary epoch in which human and natural forces are so entwined that the future of one determines that of the other Wark explores the implications of Anthropocene through the story of two empires the Soviet and then the American The fall of the former prefigures that of the latter From the ruins of these mighty histories Wark salvages ideas to help us picture what kind of worlds collective labor might yet build From the Russian revolution Wark unearths the work of Alexander Bogdanov Lenin s rival as well as the great Proletkult writer and engineer Andrey Platonov The Soviet experiment emerges from the past as an allegory for the new organizational challenges of our time From deep within the Californian military entertainment complex Wark retrieves Donna Haraway s cyborg critique and science fiction writer Kim Stanley Robinson s Martian utopia as powerful resources for rethinking and remaking the world that climate change has wrought Molecular Red proposes an alternative realism where hope is found in what remains and endures

SpaceX Erik Seedhouse, 2013-06-15 This first account of commercial spaceflight's most successful venture describes the extraordinary feats of engineering and human achievement that have placed SpaceX at the forefront of the launch industry and made it the most likely candidate for transporting humans to Mars. Since its inception in 2002, SpaceX has sought to change the space launch paradigm by developing a family of launch vehicles that will ultimately reduce the cost and increase the reliability of space access tenfold. Coupled with the newly emerging market for governmental, private, and commercial space transport, this new model will re-ignite humanity's efforts to explore and develop space. Formed in 2002 by Elon Musk, the founder of PayPal and the Zip2 Corporation, SpaceX has already developed two state-of-the-art new launch vehicles, established an impressive launch manifest, and been awarded COTS funding by NASA to demonstrate delivery and return of cargo to the ISS. This book describes how simplicity, low cost, and reliability can go hand in hand as promoted in the philosophy of SpaceX. It explains how, by eliminating the traditional layers of internal management and external sub-contractors and keeping the vast majority of manufacturing in-house, SpaceX reduces its costs while accelerating decision-making and delivery, controls quality, and ensures constant liaison between the design and manufacturing teams.

Exploring Planet Mars David Jefferis, Mat Irvine, 2007 Exploring Planet Mars looks at the scientific facts about Earth's nearest neighbor and delves into future exploration of the planet, possibly even colonization. Discoveries from the recent probes sent to the planet will be explored, and whether they help confirm signs of life on Mars or not.
