The 21st Century Brain Richard Restak, 2025-11-18 Discover the Influences of Social Media, Artificial Intelligence, AI, Climate Change, Stress, and More on Our Brains and Behavior. Unique to the Twenty-first Century. During the past twenty-five years, we've encountered powerful influences for good and bad on brain function and even brain structure. Consider the changes that have already taken place in how we communicate. During the last half of the twentieth century, images displaced words as the common parlance of communication. On the nightly news, we've become accustomed to watching images drawn from video cameras used by law enforcement, and thanks to a proliferating number of cellphones, everyday use. Yet AI is turning the traditional dynamic that images carry more weight than words, seeing is believing, upside down because we now have to question the authenticity of images. We are finding ourselves forced to adjust to a world where what we see is not always what's really happening. Next, consider the effects of our changing environment on our brains and our behavior. There is good reason to believe that a link exists between an increase in global temperature and suicide. Wildfires becoming more and more common thanks to climate change affect air quality, which is often undetectable by the average person until it reaches toxic levels. Studies have proven that wildfire smoke is affecting our brains and potentially causing disease. Perhaps the greatest twenty-first-century contributor to changes in brain function is stress. Due to many factors explored in the book, it's likely that levels of mental and emotional instability are on the horizon that can only be fully understood by focusing on the changes in the human brain brought about by these unparalleled levels of stress. The brain is always evolving. The 21st Century Brain will describe those influences on brain and behavior that are unique to this century as well as available preventive measures to mitigate some of these factors. This book is a quintessential study on how our brains are uniquely changing in the twenty-first century as well as a guide to the personal and collective measures that can be taken to eliminate these factors or reduce their impact.
