Stem Kits How To:

Preparing STEM Teachers Joanne E. Goodell, Selma Koç, 2020-09-01 STEM project based instruction is a pedagogical approach that is gaining popularity across the USA. However, there are very few teacher education programs that focus specifically on preparing graduates to teach in project based environments. This book is focused on the UTeach program, a STEM teacher education model that is being implemented across the USA in 46 universities. Originally focused only on mathematics and science, many UTeach programs are now offering engineering and computer science licensure programs as well. This book provides a forum to disseminate how different institutions have implemented the UTeach model in their local context. Topics discussed will include sustainability features of the model and how program assessment, innovative instructional programming, classroom research, and effectiveness research have contributed to its success. The objectives of the book are: To help educators gain insight into a teacher education organizational model focused on STEM and how and why it was developed; To present the theoretical underpinnings of a STEM education model, i.e., deep learning, conceptual understanding; To present innovative instructional programming in teacher education, i.e., project-based instruction, functions, and modeling research methods; To present research and practice in classroom and field implementation and future research recommendations; To disseminate program assessments and improvement efforts.

Developing and Sustaining STEM Programs Across the K-12 Education Landscape Spott, Jessica L., Sobehrad, Lane J., Hite, Rebecca L., 2023-08-30 Locally or individually, STEM programs provide additional opportunities to engage K-12 students, including those from marginalized groups, with the support of STEM outreach organizations through the co-construction and implementation of STEM activities during school, out of school, at home, and in the community. Research suggests that community engaged partnerships forge relationships that can enhance and sustain K-12 STEM education efforts between K-12 districts and the scholarly community. There is a need to highlight community engaged teaching and scholarship produced from partnerships between K-12 school districts and STEM outreach organizations. *Developing and Sustaining STEM Programs Across the K-12 Education Landscape* describes the purpose of the collaboration between K-12 school districts and STEM outreach organizations, the STEM activities that participating K-12 students engage in, and the impacts on STEM learners that emerge from the partnership. Covering topics such as continuous program improvement, school industry partnerships, and student success, this premier reference source is an excellent resource for educational leaders and administrators, pre-service and in-service educators, teacher educators, researchers, and academicians.
