Streaming Systems Tyler Akidau,Slava Chernyak,Reuven Lax,2018-07-16 Streaming data is a big deal in big data these

days As more and more businesses seek to tame the massive unbounded data sets that pervade our world streaming systems have finally reached a level of maturity sufficient for mainstream adoption With this practical guide data engineers data scientists and developers will learn how to work with streaming data in a conceptual and platform agnostic way Expanded from Tyler Akidau's popular blog posts Streaming 101 and Streaming 102 this book takes you from an introductory level to a nuanced understanding of the what where when and how of processing real time data streams You'll also dive deep into watermarks and exactly once processing with co authors Slava Chernyak and Reuven Lax You'll explore How streaming and batch data processing patterns compare The core principles and concepts behind robust out of order data processing How watermarks track progress and completeness in infinite datasets How exactly once data processing techniques ensure correctness How the concepts of streams and tables form the foundations of both batch and streaming data processing The practical motivations behind a powerful persistent state mechanism driven by a real world example How time varying relations provide a link between stream processing and the world of SQL and relational algebra

Using Additional Information in Streaming Algorithms Raffael Buff, 2016-12-08 Streaming problems are algorithmic problems that are mainly characterized by their massive input streams Because of these data streams the algorithms for these problems are forced to be space efficient as the input stream length generally exceeds the available storage The goal of this study is to analyze the impact of additional information more specifically a hypothesis of the solution on the algorithmic space complexities of several streaming problems To this end different streaming problems are analyzed and compared The two problems most frequent item and number of distinct items with many configurations of different result accuracies and probabilities are deeply studied Both lower and upper bounds for the space and time complexity for deterministic and probabilistic environments are analyzed with respect to possible improvements due to additional information The general solution search problem is compared to the decision problem where a solution hypothesis has to be satisfied
