Google Maps Today:

A History of the World in 12 Maps Jerry Brotton, 2013-11-14 A New York Times Bestseller Maps allow the armchair traveler to roam the world the diplomat to argue his points the ruler to administer his country the warrior to plan his campaigns and the propagandist to boost his cause rich and beautiful Wall Street Journal Throughout history maps have been fundamental in shaping our view of the world and our place in it But far from being purely scientific objects maps of the world are unavoidably ideological and subjective intimately bound up with the systems of power and authority of particular times and places Mapmakers do not simply represent the world they construct it out of the ideas of their age In this scintillating book Jerry Brotton examines the significance of 12 maps from the almost mystical representations of ancient history to the satellite derived imagery of today He vividly recreates the environments and circumstances in which each of the maps was made showing how each conveys a highly individual view of the world Brotton shows how each of his maps both influenced and reflected contemporary events and how by considering it in all its nuances and omissions we can better understand the world that produced it Although the way we map our surroundings is more precise than ever before Brotton argues that maps today are no more definitive or objective than they have ever been Readers of this beautifully illustrated and masterfully argued book will never look at a map in quite the same way again A fascinating and panoramic new history of the cartographer's art The Guardian The intellectual background to these images is conveyed with beguiling erudition There is nothing more subversive than a map The Spectator A mesmerizing and beautifully illustrated book The Telegraph

technologies have changed how we shop work play and communicate reshaping our societies and economies To understand digital capitalism we need to grasp how advances in geospatial technologies underpin the construction operation and refinement of markets for digital goods and services In *The Map in the Machine* Luis F Alvarez Leon examines these advances from MapQuest and Google Maps to the rise of IP geolocation ridesharing and a new Earth Observation satellite ecosystem He develops a geographical theory of digital capitalism centered on the processes of location valuation and marketization to provide a new vantage point from which to better understand and intervene in the dominant techno-economic paradigm of our time By centering the spatiality of digital capitalism Alvarez Leon shows how this system is the product not of seemingly intangible information clouds but rather of a vast array of technologies practices and infrastructures deeply rooted in place mediated by geography and open to contestation and change

Geography Today

Ian Muehlenhaus, 2019-08-08 Geography Today provides a thoughtful and thorough introduction to the study of geography from maps and technology to the study of different cultures political systems and economies and an investigation of plate tectonics and climate systems Geography Today An Encyclopedia of Concepts Issues and Technology approaches the study of geography by concept in contrast to most other works which are organized by world region Geography curriculums have been moving away from teaching the topic on a regional basis and toward teaching it through broader concepts This is modeled by the National Geography Standards the National Council for Geographic Education's Roadmap for 21st Century Geography Education Texas Essential Knowledge and Skills Resource System and ABC-CLIO's own geography advisory board comprised of high school geography teachers from across the United States By introducing geography concepts Geography Today sets the foundation for readers to understand why certain geographies may be the way they are It further helps high school geography students to apply concepts to different contexts with 101 geography terms themes and concepts for quick reference research and study
