and more time indoors if we could distract ourselves from the outside world in the form of increased digital connectivity and entertainment. In the place of social interactions in real life we went online. It became routine to meet up with friends and family for calls over Zoom and we focused on the people and things that mattered most to us. We shared our lives and worlds the only way we could digitally. Fast forward to today more than a year later and while the pandemic is still here there is hope now. I am hopeful. This is definitely not the way I imagined I would start my first book with a retrospective but as we look toward the future it is hard not to see the lasting impact the last two years 2020-2022 has had on the very way humanity interacts with the world. As more experiences shift to virtual and more and more collaboration takes place online we need to take a fundamentally different approach to how we architect our next generation platforms, frameworks, and technologies. The magnitude shifts in system scale and processing power require evolutionary thinking, revolutionary data platforms, and data-centric ecosystems to emerge to power this digital future. Hyper-connectivity and intelligent automation will power real-time consistent data systems at an incredible scale and today is just the beginning. This book is not about the future but rather it teaches you how to build reliable data systems today harnessing the incredible power of Apache Spark to orchestrate consistent, scalable streaming applications built from the fundamental building blocks of the modern data ecosystem by you, the modern data engineer. Using a hands-on approach you learn to leverage many of the best practices and problem-solving skills necessary to make it in the exciting field of data engineering.
