Production of Biofuels and Chemicals with Ionic Liquids Zhen Fang, Richard L. Smith, Jr., Xinhua Qi, 2013-10-31 The application of ionic liquids to biomass for producing biofuels and chemicals will be one of the hot research areas during the next decade due to the fascinating properties of these versatile group of solvents that allow them to dissolve lignocellulosic materials The present text provides up to date fundamentals state of the art reviews current assessments and prospects in this area including aspects of pretreatment fermentation biomass dissolution cellulose transformation reaction kinetics and physical properties as well as the subsequent production of biofuels and platform chemicals such as sugars aldehydes and acids Auxiliary methods such as catalysis microwave and enzymatic techniques used in the transformations are covered Both researchers and practitioners are certain to find a wealth of information in the individual chapters which were written by experts in the field to provide an essential basis for assessing possible pretreatment and transformation routes of biomass using ionic liquids and for developing new methods and chemical processes Dr Zhen Fang is Professor of Bioenergy head of the Chinese Academy of Sciences Biomass Group Xishuangbanna Tropical Botanical Garden and is also an Adjunct Professor of Life Sciences University of Science and Technology of China Dr Richard L Smith Jr is Professor of Chemical Engineering at the Graduate School of Environmental Studies Research Center of Supercritical Fluid Technology Tohoku University Japan Dr Xinhua Qi is Professor of Environmental Science at Nankai University China Applied Spectroscopy ,1966

Chemical and Engineering News , A History of Analytical Chemistry Herbert August Laitinen, Galen Wood Ewing, 1977 The Role of Chemical Markers and Chemometrics in the Identification of Grasses Used as Food in Pre-agrarian South West Asia Michelle Cave, 2004 This work explores the way in which novel chemical criteria can be used to identify charred remains of grains of small grained grasses used as food by pre agrarian hunter gatherers in south western Asia but which have hitherto rarely been identified with any precision The grass family Gramineae or Poaceae is the most diverse abundant and widespread family of higher plants on the planet Grasses correspondingly have enormous ecological and economic importance worldwide Their importance is reflected in the prominent role of grain from wild grasses in hunter gatherer subsistence In order to reconstruct past subsistence practices and diet especially of arid zone hunter gatherers it is important to identify the remains of grasses recovered from archaeological sites However the recovered grass remains are most often charred therefore the interpretive potential can be realized only if these charred remains are accurately identified at the level of genus and in some cases species There are enormous problems in identifying charred remains particularly when relying totally on gross morphological criteria There is therefore a need for alternative criteria such as that utilized by chemical analytical techniques The core rationale in applying the different chemical techniques is the same throughout grains are taken from modern grasses of known identity and spanning a spectrum of taxa likely to include all the charred ancient specimens to be identified the unknowns These modern grains are then analysed to generate spectra Equivalent spectra from unknowns are then compared with those from the modern grains to effect an identification Standard practice has hitherto involved comparing the two sets of spectra known and unknowns by visual inspection i e by eye However identifications based on such comparisons are inevitably to some degree untestable and unrepeatable and this represents a long standing problem in chemistry generally In the present project the author has therefore explored the use of chemometrics i e the use of statistical systems to compare spectra in a manner that is rigorously testable and repeatable This is an entirely new development and has never previously been applied in the analysis of archaeological data Applied Optics ,1963 *Encyclopedia of Instrumentation for Industrial Hygiene* University of Michigan.
