Design Innovation and Network Architecture for the Future Internet Boucadair, Mohamed,Jacquet, Christian,2021-04-16 For the past couple of years network automation techniques that include software defined networking SDN and dynamic resource allocation schemes have been the subject of a significant research and development effort Likewise network functions virtualization NFV and the foreseeable usage of a set of artificial intelligence techniques to facilitate the processing of customers requirements and the subsequent design delivery and operation of the corresponding services are very likely to dramatically distort the conception and the management of networking infrastructures Some of these techniques are being specified within standards developing organizations while others remain perceived as a buzz without any concrete deployment plans disclosed by service providers An in depth understanding and analysis of these approaches should be conducted to help internet players in making appropriate design choices that would meet their requirements as well as their customers This is an important area of research as these new developments and approaches will inevitably reshape the internet and the future of technology Design Innovation and Network Architecture for the Future Internet sheds light on the foreseeable yet dramatic evolution of internet design principles and offers a comprehensive overview on the recent advances in networking techniques that are likely to shape the future internet The

chapters provide a rigorous in depth analysis of the promises pitfalls and other challenges raised by these initiatives while avoiding any speculation on their expected outcomes and technical benefits This book covers essential topics such as content delivery networks network functions virtualization security cloud computing automation and more This book will be useful for network engineers software designers computer networking professionals practitioners researchers academicians and students looking for a comprehensive research book on the latest advancements in internet design principles and networking techniques

Performance Analysis of Communications Networks and Systems Piet Van Mieghem, 2009-04-09 This rigorous and self contained book describes mathematical and in particular stochastic methods to assess the performance of networked systems It consists of three parts The first part is a review on probability theory Part two covers the classical theory of stochastic processes Poisson renewal Markov and queuing theory which are considered to be the basic building blocks for performance evaluation studies Part three focuses on the relatively new field of the physics of networks This part deals with the recently obtained insights that many very different large complex networks such as the Internet World Wide Web proteins utility infrastructures social networks evolve and behave according to more general common scaling laws This understanding is useful when assessing the end to end quality of communications services for example in Internet telephony real time video and interacting games Containing problems and solutions this book is ideal for graduate students taking courses in performance analysis

Optical Packet Access Protocols for WDM Networks Kemal Bengi, 2012-12-06 The fast growing traffic demand in telecommunication networks by use of the Internet and an increasing number of broadband services for multimedia communications requires new high performance networking technologies As such optical WDM networks are playing a pivotal role Wavelength Division Multiplexing WDM with many hundreds of wavelength channels per fiber is extensively being exploited in wide area networks With respect to the ongoing trend towards a completely packet switched mode of operation for all services WDM networks must be prepared accordingly This work concentrates on optical packet switched networking in local and metro area networks for realizing high performance applications like virtual reality medical imaging and supercomputing It is well known that in those networks using a star bus or ring shared medium an access protocol is necessary to guarantee controlled and fair access for all attached nodes Similar access protocols are to be developed and analyzed for WDM local and metro area networks Already many media access protocols for these networks have been described in the literature However some aspects of Quality of Service QoS for different service classes are still an open issue and subject to intensive research activities In the introduction the author Dr Kemal Bengi gives a short classification of media access protocols and network architectures for WDM local and metro area networks The need for service classes is also emphasized
