Think Fast - Sail Faster Gavin Dagley, 2020-06-18 Think Fast Sail Faster started out as a series of articles published in the U S based Sailing World magazine called Conversations with the Doc This book expands those original ideas into a comprehensive rethink about how we understand sailboat racing and how the way we think affects racing performance The book represents a fundamental reconstruction of many of the core concepts of sailboat racing Here are some of the innovations Feel is a central theme Feel often receives relatively little attention in sailing texts but is one of the most important factors in sailing performance How we think about sailing conditions has been re designed The new classifications of wind conditions fragile powering up depowering too much require the sailor to focus on the boat itself rather than focusing

outside the boat and trying to guess whether the conditions might be light medium or strong Wind strategy has been substantially overhauled The usual classification system for wind shift patterns has been extended into four new groupings These ideas combined with explanations of wind sense enable sailors to make direct connections between what they see and the best strategies for winning races Other novel topics include three phase oscillating breezes the no brainer race the eight standard port starboard crossing strategies how to not use a compass explanation of offshore breeze patterns the complexities and misinformation about sailing in current a complete sail racing performance model psychological performance issues how risk management and wind strategy combine and how to build your own wind forecasting system Finally these ideas are presented as conversations between the Doc and his fictional friends rather than as lists of instructions Throughout the text there are margin notes and at the end of each chapter there is a simple summary of the main ideas

Designing the Dynamic Jane Burry, 2013 Who knows more about the performance impact of design changes in real time than the sailor and sail trimmer in an ocean race Performance can be most influential on design decision making when the performance response to design change is experienced in real time In architecture and design dynamic feedback is the computational and analogue design challenge of the hour how to experience within dynamic digital and physical design models as those changes are actually happening So in this book the challenge is first explored by looking beyond the design of the static built infrastructure of the city to the ultimate in reflexive action and high performance design sailboat racing Successful design decision making relies on design team interaction between individuals of very diverse expertise and points of departure generalists and specialists Designing the Dynamic brings together leading researchers from architecture boat design industrial design mathematics aerospace structural engineering and computer science to explore the design and representation of dynamic systems The authors expose diverse aspects of the subject ranging from the empirical science and sociology to the deep poetry of designing with dynamic phenomena Major Selling Point This is a cutting edge design book that will be of real interest to those involved in the dynamics of practical super efficient design methods as well as those with an interest in sailing and maximising the efficiency of sails in racing conditions
