Perkin Elmer Diamond Manual:

Freeze-Drying of Pharmaceutical and Food Products Tse-Chao Hua, Bao-Lin Liu, Haimei Zhang, 2010-07-30 Freeze drying is an important preservation technique for heat sensitive pharmaceuticals and foods. Products are first frozen then dried in a vacuum at low temperature by sublimation and desorption rather than by the application of heat. The resulting items can be stored at room temperature for long periods. This informative text addresses both principles and practice in this area. The first chapter introduces freeze drying. The authors then review the fundamentals of the technique, heat mass transfer analyses, modelling of the drying process and the equipment employed. Further chapters focus on freeze drying of food, freeze drying of pharmaceuticals and the protective agents and additives applied. The final chapter covers the important subjects of disinfection, sterilization and process validation. *Freeze drying of pharmaceutical and food products* is an essential reference for food, pharmaceutical and refrigeration engineers and scientists with an interest in preservation techniques. It will also be of use to students in these fields. Addresses the principles and practices used in this important preservation technique. Explains the fundamentals of heat mass transfer analysis, modelling and the equipment used. Discusses the importance of disinfection, sterilization and process validation. *Moody's Industrial Manual*, 1996. This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series; they are collections of at least ten articles all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area. Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org/about/contact. *Metal Finishing*, 1940. *Advanced Flame Retardant Materials* Fouad Laoutid, 2020-03-06. Recent disasters caused by the spread of fire in buildings and in transportations remind us of the importance of fire protection. Using flame retardant materials is one important element of the firefighting strategy which aims to prevent fire development and propagation. These materials are used in different applications such as in textiles, coatings, foams, furniture and cables. The development of more efficient and

environmentally friendly flame retardant additives is an active multidisciplinary approach that has attracted a great deal of interest. Studies have aimed at the development of new sustainable and flame retardant additives materials providing high performance and low toxicity. Also studied were their properties during ageing and recycling as well as modeling physical and chemical processes occurring before ignition and during their combustion. The development of sustainable flame retardants and understanding their modes of action provide a strong link between these topics and cover many fields from organic chemistry materials engineering and toxicology to physics and mathematics.
