Music in a Digital Music Economy Tim Anderson,2013-12-17 In the late 1990s the MP3 became the de facto standard for digital audio files and the networked computer began to claim a significant place in the lives of more and more listeners The dovetailing of these two circumstances is the basis of a new mode of musical production and distribution where new practices emerge This book is not a definitive statement about what the new music industry is Rather it is devoted to what this new industry is becoming by examining these practices as experiments dedicated to negotiating what is replacing an object based industry oriented around the production and exchange of physical recordings In this new economy constant attention is paid to the production and licensing of intellectual property and the rise of the social musician who has been encouraged to become more entrepreneurial Finally every element of the industry now must consider a new type of audience the end user and their productive and distributive capacities around which services and musicians must orient their practices and investments **The Rise of the New Network Industries** Juan Montero,Matthias Finger,2021-05-04 Cutting through

the confusion around the nature and implications of digitalization this book explores the rise of the new digital networks how they affect traditional infrastructure and how they will eventually need to be regulated The authors examine how digitalization affects infrastructures in telecommunications transport and energy and how digital platforms establish themselves as a new network on top of and in addition to traditional ones Complex concepts are introduced through short and colorful stories about the founders of the most popular platforms Google Facebook Skype Uber etc and how they grew to positions of power drawing parallels with century old traditional network industries monopoly power AT T General Electric etc The authors argue that these digital platforms strongly interfere with traditional infrastructures that are heavily regulated and provide essential services for society meaning that digital platforms should be considered as a new and much more powerful type of infrastructure and will require regulation accordingly A global audience of policy makers public authorities consultants lawyers students and academics as well as anyone with an interest in these digital platforms will find

Hyperscale and Microcare Peter Verhasselt, Nick Boucart, 2018-12-05 How to build winning digital products today. In this book, the authors explore what it takes to build winning digital products today. They focus on the idea that one should stop building software and build digital services instead, effectively combining Hyperscale and Microcare: the ability to establish an intimate relationship with each and every one of your thousands of users. The authors discuss the capabilities and processes you need to build such digital services. They zoom in on the kinds of assets you need to develop and that will greatly influence the valuation, all supported with practical advice and real-world examples. Discover a guide with practical advice and real-world examples to build digital services and create relationships with users. **EXTRAIT** As any cookbook, this work contains recipes, ingredient descriptions, and best practices. To us, both amateur chefs, a flaw of most kitchen guides is the focus on lists and the weak insight they bring about the basic mechanisms. The process behind a tricky recipe like sauce Hollandaise is an emulsion between an oil and an aqueous component; butter and lemon juice are bound by egg yolk, used as an emulsifier. Digital entrepreneurship cookbooks show the same weakness. They distill guidelines without linking them to the root mechanisms in digital. We base our recipes on these mechanisms. To explain them, we tell the story through the arrival of three digital paradoxes. Paradoxes intrigue, trigger curiosity, and animate a discussion between peers. That's why they are excellent starting material to reason about a world in change. **PROPOS DE L'AUTEUR** Peter Verhasselt coaches technology companies in optimizing their Product Management Business Plan and Go-to-Market strategy. Before joining Sirris, Peter worked for industrial companies in Sales and Product Management, Field Service, and R&D. Peter has degrees in Engineering, Law, Economics, and Management. Nick Boucart is a mentor, coach, and regular speaker on topics like Cloud SaaS, Data-Driven Product Management, and Software Engineering. He's an interim CTO for a number of startups. Prior to working at Sirris, Nick was a software engineer at LMS International and EMC.

Streaming Sounds Michael James Walsh, 2024-03-29 In a time when music streaming has become the dominant mode of consuming music recordings, this book interrogates how users go about listening to music in their everyday lives in a context where streaming services are focused on not only the circulation of music for users but also the circulation of user data and attention. Drawing insights directly from interviews with users, music streaming is explained as never merely a neutral technology but rather one that seeks to actively shape user engagement. Users respond to streaming platforms with some relishing these aspects that provide music to be drawn into daily activities while others show signs of resistance. It is this tension that this book explores. This unique and accessible study will be ideal reading for both scholars and students of popular music studies, communication studies, sociology, media, and cultural studies.
