Mcgraw Hill Networks Essentials And Study Guide:

Computer Networks Dr. K. Ramesh Kumar, IP Addressing and Subnetting INC IPV6 Syngress, 2000-01-28

Internetworking Protocol IP addresses are the unique numeric identifiers required of every device connected to the Internet. They allow for the precise routing of data across very complex worldwide internetworks. The rules for their format and use are governed by the Internet Engineering Task Force IETF of the The Internet SOCIety ISOC. In response to the exponential increase in demand for new IP addresses the IETF has finalized its revision on IP addressing as IP Version 6 also known as IPng. Next Generation Key hardware vendors such as Cisco and major Internet Service Providers such as America Online have already announced plans to migrate to IP Version 6. IP address allocation within an organization requires a lot of long term planning. This timely publication addresses the administrator and engineer's need to know how IP 6 impacts their enterprise networks. Easy to read light technical approach to cellular technology. Ideal for companies planning a phased migration from IP 4 to IP 6. Timely publication. The IETF standard was finalized in early 1999 and will begin to be implemented in late 1999/2000. The current IP Version 4 address set will be exhausted by 2003. The book focuses on planning and configuring networks and devices for IP 6. Specifically it will cover how to: Increase the IP address size from 32 bits to 128 bits. Support more levels of addressing hierarchy. Support an increased number of addressable nodes. Support simpler auto configuration of addresses. Improve the scalability of multicast routing by adding a scope field to multicast addresses. Use a new anycast address to send a packet to any one of a group of nodes. **Information Assurance** Andrew

Blyth, Gerald L. Kovacich, 2013-04-17. When you first hear the term Information Assurance you tend to conjure up an image of a balanced set of reasonable measures that have been taken to protect the information after an assessment has been made of risks that are posed to it. In truth this is the Holy Grail that all organisations that value their information should strive to achieve but which few even understand. Information Assurance is a term that has recently come into common use. When talking with old timers in IT or at least those that are over 35 years old you will hear them talking about information security a term that has survived since the birth of the computer. In the more recent past the term Information Warfare was coined to describe the measures that need to be taken to defend and attack information. This term however has military connotations after all warfare is normally their domain. Shortly after the term came into regular use it was applied to a variety of situations encapsulated by Winn Schwartau as the three classes of Information Warfare: Class 1 Personal Information Warfare, Class 2 Corporate Information Warfare, Class 3 Global Information Warfare. Political sensitivities lead to warfare being replaced by operations a much more politically correct word. Unfortunately operations also has an offensive connotation and is still the terminology of the military and governments. *MCSE Networking Essentials Exam Prep* Ed Tittel, David Johnson, 1998.
