Sources for a Better Education Piet Kommers, 2022-02-22 This textbook evolves from the intersection between Research Educational Information Technologies and recent Best Practices It offers diplomacy and erudite rhetoric in order to harvest from innovation projects and see how new professional needs for teachers are emerging day by day The volume launches the compact background for the 21st century education that every teacher faces after being in charge for 3 or 6 years after pre service training Sources for a better education refers to the deep understanding and to the incentives for encouraging teachers to leave the comfort zone and experiment the next steps into a further sophisticated professionalism without the threat of feeling in a Dilemma The first candidate for extending one s teaching effectiveness is to tailor one s teaching to the test to be expected Teaching to the Test is an understandable tactic however it endangers the students full understanding of underlying concepts and analogies The second candidate for professionalism is the deeper layer of knowledge on how curricular domains are related In simpler terms better teachers know how to bridge topics and subjects so that students develop a deeper understanding on the patterns and structure in knowledge The 21st century education prioritizes higher degrees of flexible divergent and abstract thinking so that creative problem solving comes into reach ICT tools for making prior knowledge explicit is a major example on how learners harvest upon prior knowledge thinking and intuition The third source for a better education is the courage to envisage one s meta knowledge in order to see patterns in learning and understanding The more conscious prior knowledge gets decompiled into genetic metaphors the better future learning can be anticipated The fourth asset for meta cognitive skills is the wide spectrum of tools that the web offers for building knowledge infra structures so that knowledge becomes transformed into problem solving skills the availability of knowledge is no longer sufficient for finding creative and authentic solutions in future situations This is the case for both students and teachers By tradition the bottom up strategy from reproductive factual learning up to the levels of problem solving and creative thinking has been favoured The one click away access to information on the web asks a more strategic attitude from learners and practitioners to cope with the periphery between known and unknown so that a more effective meta cognition develops The fifth stimulus for more effective learning is the expanding impact of social media Social
