Relevant Query Answering over Streaming and Distributed Data Shima Zahmatkesh, Emanuele Della Valle, 2020-01-21 This book examines the problem of relevant query answering over the Web and provides a comprehensive overview of relevant query answering over streaming and distributed data In recent years Web applications that combine highly dynamic data streams with data distributed over the Web to provide relevant answers have attracted increasing attention Answering in a timely fashion i e reactively is one of the most important performance indicators especially when the distributed data is evolving The book proposes a solution that retains a local replica of the distributed data and offers various maintenance policies to refresh the replica over time A limited refresh budget guarantees the reactivity of the system Focusing on stream processing and Semantic Web it appeals to scientists and graduate students in the field

Spatio-Temporal Stream Reasoning with Adaptive State Stream Generation Daniel de Leng, 2017-09-08 A lot of today's data is generated incrementally over time by a large variety of producers This data ranges from quantitative sensor observations produced by robot systems to complex unstructured human generated texts on social media With data being so abundant making sense of these streams of data through reasoning is challenging Reasoning over streams is particularly relevant for autonomous robotic systems that operate in a physical environment They commonly observe this environment through incremental observations gradually refining information about their surroundings This makes robust management of streaming data and its refinement an important problem Many contemporary approaches to stream reasoning focus on the issue of querying data streams in order to generate higher level information by relying on well known database approaches Other approaches apply logic based reasoning techniques which rarely consider the provenance of their symbolic interpretations In this thesis we integrate techniques for logic based spatio temporal stream reasoning with the adaptive generation of the state streams needed to do the reasoning over This combination deals with both the challenge of reasoning over streaming data and the problem of robustly managing streaming data and its refinement The main contributions of this thesis are 1 a logic based spatio temporal reasoning technique that combines temporal reasoning with qualitative spatial reasoning 2 an adaptive reconfiguration procedure for generating and maintaining a data stream required to perform spatio temporal stream reasoning over and 3 integration of these two techniques into a stream reasoning framework The proposed spatio temporal stream reasoning technique is able to reason with intertemporal spatial relations by leveraging landmarks Adaptive state stream generation allows the framework to adapt in situations in which the set of available streaming resources changes Management of streaming resources is formalised in the DyKnow model which introduces a configuration life cycle to adaptively generate state streams The DyKnow ROS stream reasoning framework is a concrete realisation of this model that extends the Robot Operating System ROS DyKnow ROS has been deployed on the SoftBank Robotics NAO platform to demonstrate the system's capabilities in the context of a case study on run time adaptive reconfiguration The

results show that the proposed system by combining reasoning over and reasoning about streams can robustly perform spatio temporal stream reasoning even when the availability of streaming resources changes **Broadband**

Smelser, John C. Schmidt, 1998 Successful management of water in mountain streams by the USDA Forest Service requires that the link between resource development and channel change be documented and quantified The characteristics of that linkage are unclear in mountain streams and the adjustability of these streams to land use and hydrologic change has been

argued in court One way to quantify the adjustability of a stream is to examine its geomorphic history An excellent source of historic geomorphic data are the records associated with stream gaging stations maintained by the U S Geological Survey This report describes what records are available how to organize the data on computer spreadsheets and discusses 6 techniques that quantify the spatial and temporal magnitude of historic channel adjustments The discharge measurements include physical measurements of the channel In particular USGS discharge measurements include physical measurements of the channel By analyzing these measurements collectively it is possible to quantify monthly annual and decadal scales of adjustment Once the history of channel adjustment is determined it can be compared to histories of climate change flow regulation and land use These comparisons may link the geomorphic adjustments to particular patterns events or activities Resource managers can use this knowledge to better assess the ramifications of resource development land use and restoration efforts on mountain stream systems Rueter-Hess Reservoir, Douglas County ,2003

Modelling Spark Ignition Combustion P. A. Lakshminarayanan, Avinash Kumar Agarwal, Haiwen Ge, J. M. Mallikarjuna, 2024-05-15. The book provides a comprehensive overview of combustion models used in different types of spark ignition engines. In the first generation of spark ignition SI engines, the turbulence is created by the shear flow passing through the intake valves and significantly decays during the intake and compression strokes. The residual turbulence enhances the laminar flame velocity, which is characteristic of the fuel, and increases the relative effectiveness of the engine. In this simple two-zone model, the turbulence is estimated empirically. The spherical flame propagation model considers ignition delay, thermodynamics, heat transfer, and chemical equilibrium to obtain the performance and emissions of an SI engine. The model is used extensively by designers and research engineers to handle the fuel-air mixture prepared in the inlet and different geometries of open combustion chambers. The empiricism of the combustion model was progressively dismantled over the years. New 3D models for ignition, considering the flow near a spark plug and flame propagation in the bulk gases, were developed by incorporating solutions to Reynolds-averaged Navier-Stokes (RANS) equations for the turbulent flow with chemical reactions in the intense computational fluid dynamics. The models became far less empirical and enabled treating new generation direct injection spark ignition (DISI) gasoline and gas engines. The more complex layout of DISI engines with passive or active prechamber is successfully handled by them. This book presents details of models of SI engine combustion progressively increasing in complexity, making them accessible to designers, researchers, and even mechanical engineers who are curious to explore the field. This book is a valuable resource for anyone interested in spark ignition combustion.

Cerebral Cortex Edmund T. Rolls, 2016-08-12 The aim of this book is to provide insight into the principles of operation of the cerebral cortex These principles are key to understanding how we as humans function There have been few previous attempts to set out some of the important principles of operation of the cortex and this book is pioneering The book goes beyond separate connectional neuroanatomical neurophysiological neuroimaging neuropsychiatric and computational neuroscience approaches by combining evidence from all these areas to formulate hypotheses about how and what the cerebral cortex computes As clear hypotheses are needed in this most important area of 21st century science how our brains work I have formulated a set of hypotheses about the principles of cortical operation to guide thinking and future research The book focusses on the principles of operation of the cerebral cortex because at this time it is possible to propose and describe many principles and many are likely to stand the test of time and provide a foundation for further developments even if some need to be changed In this context I have not attempted to produce an overall theory of operation of the cerebral cortex because at this stage of our understanding such a theory would be incorrect or incomplete However many of the principles described will provide the foundations for more complete theories of the operation of the cerebral cortex This book is intended to provide a foundation for future understanding and it is hoped that future work will develop and add to these principles of operation of the cerebral cortex The book includes Appendices on the operation of many of the neuronal networks described in the book together with simulation software written in Matlab
