[Learning Web Development with the MEAN Stack](#) Michael Perrenour, 2015

MEAN is the now famously known combination of MongoDB, Express.js, AngularJS, and Node.js which has emerged as one of the leading technology stacks for developing dynamic web applications. The MEAN stack simplifies development and promotes team cohesion by allowing applications to be written and maintained entirely in JavaScript on the frontend and backend. This course focuses on the full stack MEAN development process and goes in depth by incorporating a supporting architecture with Grunt and integrating automated testing. It will walk you through building a real enterprise grade application. Starting out with the fundamentals of the MEAN stack technologies, you will learn how to build a strong solution architecture for automated builds and distributed development. You will then dive deep into Grunt, Bower, and npm to become a full stack MEAN engineer. You will discover how to build one to many relationships using arrays of objects in Mongoose. Diving even deeper, you will meet new technologies such as D3.js which will help you to build graphs for an enterprise dashboard. Then we will test our Node and Angular applications with Karma, Jasmine, Mocha, and Chai. By the end, you will be able to build a powerful MEAN backed application for working in a distributed team.
