harboring a BRAFV600E mutation benefit from combination therapy with chemotherapy and immunotherapy drugs The success of biomarker driven patient selection to improve the therapeutic response and the overall survival of patients with mCRC highlights the imperative need for further research to identify novel biomarkers for better patient tailored therapy

*Individual Quality of Life* C R B Joyce,Hannah McGee,Ciaran O'Boyle,2013-01-11 The rubric Quality of Life first came to the explicit attention of the medical profession a little over thirty years ago Despite the undoubted fact that each one of us has his or her own Quality of Life be it good or bad there is still no general agreement about its definition or the manner in which it should be evaluated Although much has been written about quality of life this work has been largely concerned with population based studies especially in health policy and health economics The importance of individual quality of life has been neglected in part because of a failure to define quality of life itself with sufficient care in part perhaps because of a belief that it is impossible to develop a meaningful method of measuring individual variables The editors of this book believe that the primary focus of quality of life is and must continue to be the individual who alone can define it and assess its changing personal significance The challenge of presenting this belief     Generative AI for the Medical Student Campion Quinn,2025-09-26 This book provides medical students with a practical non technical roadmap for understanding applying and leading generative AI in clinical practice Despite explosive interest in AI there is no accessible clinically focused primer tailored to medical students without programming backgrounds Educators and students need a resource that translates theory into actionable skills crafting effective prompts interpreting AI outputs embedding tools into workflows and upholding ethical and legal standards By filling this gap the book equips future physicians to use AI confidently and safely at the bedside and in documentation lead pilot projects and quality improvement initiatives navigate certification research and career development in digital health In short it transforms generative AI from a black box novelty into a dependable clinical partner fulfilling a critical educational need at the intersection of medicine and technology The text begins by demystifying core AI concepts transformers self attention NLP CNNs and Retrieval Augmented Generation It then moves through hands on chapters on securing stakeholder buy in prompt engineering error management and quality improvement cycles A capstone AI Journal Club and simulation exercises reinforce learning in real world vignettes while later chapters guide students through ethics research collaboration career pathways and a SMART goal driven lifelong learning plan This is an ideal guide for all medical students interested in integrating generative AI into their career     **Advances in Ocular Imaging and Biometry** Zhenzhen Liu,Xiangjia Zhu,Jiangyue Zhao,Haotian Lin,Ying Han,2022-11-09
