O'Neil, Jr.,Harold F. O'Neil,2014-03-05

Current economic difficulties and the challenge of competing in the world market have necessitated a rethinking of American approaches to the utilization of people in organizations. Management now recognizes a need to have workers take on more responsibility at the points of production of sale and of service rendered if the United States is to compete in rapidly changing world markets. This development means that much more is expected of even entry level members of the American workforce. Thus even more is expected of our high schools and colleges to provide this type of workforce. The need of American management for workers with greater skills and who can take on greater responsibility has spawned many commissions, task forces and studies. All of them have contributed to the vast evidence documenting the need for a more highly skilled workforce. These studies are summarized and synthesized in this book. However, what remains largely undone is the development of methods to assess the necessary skills that have been identified. A major portion of this book deals with assessment issues. **Workforce Readiness: Competencies and Assessment** explores the state of the art in the specification of competencies, skills and their assessment for students entering the world of work from both high school and college. Both individual and team competencies are examined via data that has been reported and collected in various settings: schools, laboratories and industrial facilities. **Sustainable Biotechnology- Enzymatic Resources of Renewable Energy** Om V. Singh, Anuj K. Chandel, 2018-08-25. Nature offers abundant renewable resources that can be used to partially replace fossil fuels and commodity chemicals, but issues of cost, technology readiness levels and compatibility with existing distribution networks remain huge challenges. Cellulosic ethanol and biodiesel are the most immediately obvious target fuels, with hydrogen, methane and butanol as other potentially viable products. This book continues to bridge the technology gap and focus on critical aspects of lignocellulosic biomolecules and the respective mechanisms regulating their bioconversion to liquid fuels into energy and value added products of industrial significance. This book is a collection of reviews elucidating several broad ranging areas of progress and challenges in the utilization of sustainable resources of renewable energy, especially in biofuels. This book comes just at a time when government and industries are accelerating their efforts in the exploration of alternative energy resources with expectations of the establishment of long term sustainable alternatives to petroleum based liquid fuels. Apart from liquid fuel, this book also emphasizes the use of sustainable resources for value added products which may help in revitalizing the biotechnology industry at a broader scale. This book also provides a comprehensive review of basic literature and advance research methodologies to graduate students studying environmental microbiology, chemical engineering, bio economy and microbial biotechnology. **Drug Discovery Toxicology** Yvonne Will, J. Eric McDuffie, Andrew J. Olaharski, Brandon D. Jeffy, 2016-04-18.
