Male Mental Illness in Contemporary Culture Christina Wilkins, 2025-11-19 This book explores contemporary cultural narratives across film television and literature to illuminate the

way male mental illness is positioned. It argues that fundamentally the male experience is shaped differently due to the impact of gender expectations. Alongside this, narratives containing suicide also often fail to address the experiential, focusing on the why instead. This results in a limited approach that upholds hegemonic ideals and with it a need to rationalize or explain mental health and suicide rather than engage with it more empathetically.

Cultural Conceptions of Mental Health and Therapy Anthony J. Marsella, G. White, 1982-04-30 Within the past two decades there has been an increased interest in the study of culture and mental health relationships This interest has extended across many academic and professional disciplines including anthropology psychology sociology psychiatry public health and social work and has resulted in many books and scientific papers emphasizing the role of sociocultural factors in the etiology epidemiology manifestation and treatment of mental disorders It is now evident that sociocultural variables are inextricably linked to all aspects of both normal and abnormal human behavior But in spite of the massive accumulation of data regarding culture and mental health relationships sociocultural factors have still not been incorporated into existing biological and psychological perspectives on mental disorder and therapy Psychiatry the Western medical specialty concerned with mental disorders has for the most part continued to ignore socio cultural factors in its theoretical and applied approaches to the problem The major reason for this is psychiatry's continued commitment to a disease conception of mental disorder which assumes that mental disorders are largely biologically caused illnesses which are universally represented in etiology and manifestation Within this perspective mental disorders are regarded as caused by universal processes which lead to discrete and recognizable symptoms regardless of the culture in which they occur However this perspective is now the subject of growing criticism and debate
