Law and Economics of Justice Klaus Mathis, Avishalom Tor, 2024-04-30 While previous volumes have examined specific issues and developments such as the coronavirus crisis or digital transformation from a law and economics perspective the anniversary edition returns to the methodological and philosophical fundament of the discipline of law and economics The present book aims to examine these foundations in general and in particular efficiency reciprocity and meritocracy and their relation to law and justice from an interdisciplinary perspective Efficiency Traditionally the economic analysis of law has been guided by the goal of efficiency Economists usually define efficiency as Pareto or Kaldor Hicks efficiency Any change that makes one member of society better off without anyone else being worse off is a Pareto improvement A change is a Kaldor Hicks improvement if the gainers value their gains more than the losers value their losses with only hypothetical compensation required Reciprocity Economists have traditionally based their models on the self interest hypothesis of homo oeconomicus In this model an individual maximises his own utility without being altruistic or jealous Behavioural economics challenges the self interest hypothesis In fact many people deviate from purely self interested behaviour There are also signs that considerations of fairness and mutual benefit are important in bilateral negotiations and in the functioning of markets Meritocracy The concept of meritocracy refers to a system organisation or society in which people are selected and promoted to positions of success power and influence on the basis of their abilities and merits This means that an individual is able to climb the social ladder through hard work Moreover meritocracy directs the most talented people into the most functionally important positions thereby increasing a society's efficiency However the equalising function of meritocracy has been criticised Rather than reducing inequality meritocracy is seen as the cause of racial economic and social inequality

Many teachers of multilingual students could improve learning outcomes through the use of education technology but don't have time for in-depth professional development that would help them in their work in this area. This book fills that gap, offering guidance and inspiration to teachers of English as a Second or Other Language (ESOL) as well as to educators in other disciplines who work with multilingual learners. Organized by six key language acquisition skills: reading, writing, speaking, listening, vocabulary, and pronunciation, each chapter features eight to twelve activities to engage students and facilitate language learning. The activities are tech-driven yet flexible enough to adapt to the needs of different classroom settings. While some specific tools are discussed, the book shows teachers how to make the activities work with the technology they have available. The book includes links to ready-to-use slide decks for every activity. Offers a knowledgeable and thoughtful introduction to using AI with language learners. Features a backward design pedagogical approach in which each activity has an end goal in mind and is then developed to incorporate appropriate and effective tools. Is accompanied by the ELT Toolkit, a searchable online database of edtech tools for English language teachers hosted by TESOL International Association. Includes connections to the ISTE Standards in every chapter. Based on research-backed practices, this book's fun and practical approach will help busy teachers leverage technology to make the language learning process more fun and effective for their students. Audience: Secondary and higher ed TESOL educators and teachers working with ESL students.
