Stock Prices, Real Exchange Rates, and Optimal Capital Accumulation International Monetary Fund, 1988-04-05 This paper analyzes the dynamics of the real exchange rate and the price of equity for a small open economy using an optimizing model in which the process of capital accumulation entails adjustment costs The analysis demonstrates that along an adjustment path toward long run equilibrium appreciation of the real exchange rate will accompany a decline in the market price of equity whereas depreciation of the real exchange rate will accompany a rise in the price of equity This relationship results from the requirement that non traded inputs are used in the investment process In the short run though the effects on these variables depend critically on whether disturbances originate in the non traded sector and on whether disturbances are perceived as temporary or permanent The disturbances considered include changes in fiscal policies as well as changes in the world interest rate

Tax Reform in Economies in Transition Mr. Vito Tanzi, 1991-03-01 The transition from a command to a market economy requires profound reforms of the tax system Such a transition will put downward pressures on the level of taxation at a time when public expenditure remains high This paper outlines the main characteristics of the tax systems in centrally planned economies It describes recent changes in those tax systems Finally it discusses the major difficulties that will be faced and the errors that must be avoided during the transition

Policy Reform, Shadow Prices, and Market Prices International Monetary Fund, 1988-10-18 How should possible policy reforms and projects be assessed when prices give misleading signals Revenues and costs at market prices then give distorted measures of social gains and losses and our appraisal should use social opportunity costs or correctly defined shadow prices We show how shadow prices may be integrated into an analysis of tax and price reform demonstrate the critical dependence of these prices on government policy and analyze their relations with market prices A conceptual framework for applied analysis is provided plus a detailed theoretical account of policy in a model with some fixed prices rationing and taxation

Implications of a Lower Capital Gains Tax Rate in the United States International Monetary Fund, 1989-12-13 This paper reviews the literature on the revenue implications of a lower capital gains tax rate in the United States The existing empirical research indicates that the timing of realizations is sensitive to tax

changes but is inconclusive on the long run revenue implications No study claims that tax revenues would increase very much on a permanent basis The paper concludes that other aspects of a lower capital gains tax rate deserves more attention in particular its impact on resource allocation and tax arbitrage

Price and Volume Effects of a Devaluation in Developing Countries Mr.Arend Kouwenaar,1991-12-01 The IMF Working Papers series is designed to make IMF staff research available to a wide audience Almost 300 Working Papers are released each year covering a wide range of

theoretical and analytical topics including balance of payments monetary and fiscal issues global liquidity and national and international economic developments

Policy Assignment Strategies with Somewhat Flexible Exchange Rates

Policy International Monetary Fund,1988-05-13 The choice of assigning monetary or fiscal policy to external balance is complicated when the authorities are concerned with both the current account balance and the exchange rate A strategy of using monetary policy to control the current account via the exchange rate may fail because the relative price effect is likely to be offset by the effect of monetary policy on aggregate demand An alternative strategy in which fiscal policy is assigned to limit shifts in the current account while the exchange rate is not directly targeted may have a better chance of having favorable effects on both variables

Tax Policy Options for a United Germany International Monetary Fund,1990-10-01 A central requirement in the rapid movement of German Democratic Republic GDR toward a market economy is the introduction of a market oriented tax system The paper highlights the main features of the traditional socialist tax structure of the GDR and the current tax structure of the Federal Republic of Germany FRG Arguments for an adequate short term tax reform in the GDR are developed in two scenarios contrasting the approach of taking over the FRG tax system adoption scenario and an autonomous tax reform in the GDR reform scenario Both scenarios recommend a flexible adjustment approach which anticipates the medium term development of the German tax system pursuant to domestic reform requirements international tax harmonization and fiscal federalism

Competition as public policy American Bar Association. Section of Antitrust Law,2010

Fiscal Balance During Inflation, Disinflation, and Immigration Efraim Sadka,Assaf Razin,1996-04-01 The paper provides an overview of the role of the fiscal imbalances and the ensuing public debt in explaining major episodes in Israel s recent economic developments The main conclusions from the Israeli budgetary developments may have more general validity a deficits lead to inflation and stopping inflation requires elimination of deficits b a major effect of inflation is a large shift of the tax burden from capital to labor and c shocks to labor supply such as massive labor inflow through immigration can be absorbed without worsening government finances when the labor and the housing markets are sufficiently flexible

The Taxation of Financial Assets Mr.John R. King,Mr.Vito Tanzi,1995-05-01

Taxes affect the degree and efficiency of financial intermediation in many different ways This paper summarizes the main tax provisions in OECD countries that affect the overall tax wedge between pre tax returns on investments and the post tax yield on the savings that finance them This tax wedge is shown to vary widely in individual countries according to the different

ways in which savings are channeled through financial markets The paper then discusses alternative criteria for assessing tax regimes for financial assets and summarizes recent trends in OECD countries *Tax Policy and the Environment* Mr.David C. L. Nellor,Mr.Ronald T. McMorran,1994-09-01 This paper provides a framework for examining environment taxes It reviews the theoretical efficiency of three types of environment taxes taxes on emissions or Pigouvian taxes taxes on productive inputs or consumer goods whose use is related to environmental damage and environment related provisions in other taxes A survey of environment taxes in 42 countries drawn from developing countries economies in transition and industrial countries illustrates that the use of environment taxes differs dramatically from the recommendations of environment tax theory This divergence between the theory and practice of environment taxes can be attributed to several factors environment taxes are difficult to implement there are many factors that impede their effectiveness and their introduction may be discouraged by their implications for other policy objectives *Tax Credits for Debt Reduction* International Monetary Fund,1989-08-21 The incentives for domestic investment in debtor countries are influenced by the terms of their external obligations and by the system of taxation utilized to provide government revenue for debt payments It is well known that existing debt contracts could be altered to improve the incentives for investment but this has proven difficult to accomplish perhaps because individual creditors have incentives not to agree to such changes In this paper we show that a simple tax credit scheme that can be implemented unilaterally by the debtor government can overcome at least some of the inefficiencies caused by existing debt contracts **International Spillovers of Taxation** International Monetary Fund,1989-05-11 This paper highlights key issues pertinent for the understanding of international effects of domestic tax policies and of international tax harmonization The analytical framework adopts the saving investment balance approach to the analysis of international economic interdependence focusing on income consumption and international borrowing A simulation model is developed that is richer in structure than the two period analytical model The analytical and simulation frameworks are used to analyze the consequences of revenue neutral conversions between income and consumption VAT tax systems the international effects of budget deficits and public debt management and the effects of international tax harmonization We demonstrate that the effects of such changes in the structure of taxes depend critically on international differences in saving and investment propensities
