Ransomware Evolution Mohiuddin Ahmed,2024-12-23 Ransomware is a type of malicious software that prevents victims from accessing their computers and the information they have stored Typically victims are required to pay a ransom usually using cryptocurrency such as Bitcoin to regain access Ransomware attacks pose a significant threat to national security and there has been a substantial increase in such attacks in the post Covid era In response to these threats large enterprises have begun implementing better cybersecurity practices such as deploying data loss prevention mechanisms and improving backup strategies However cybercriminals have developed a hybrid variant called Ransomware 2.0 In this variation sensitive data is stolen before being encrypted allowing cybercriminals to publicly release the information if the ransom is not paid Cybercriminals also take advantage of cryptocurrency's anonymity and untraceability Ransomware 3.0 is an emerging threat in which cybercriminals target critical infrastructures and tamper with the data stored on computing devices Unlike in traditional ransomware attacks cybercriminals are more interested in the actual data on the victims devices particularly from critical enterprises such as government healthcare education defense and utility providers State based cyber actors are more interested in disrupting critical infrastructures rather than seeking financial benefits via cryptocurrency Additionally these sophisticated cyber actors are also interested in obtaining trade secrets and gathering confidential information It is worth noting that the misinformation caused by ransomware attacks can severely impact critical infrastructures and can serve as a primary weapon in information warfare in today's age In recent events Russia's invasion of Ukraine led to several countries retaliating against Russia A ransomware group threatened cyber attacks on the critical infrastructure of these countries Experts warned that this could be the most widespread ransomware gang globally and is linked to a trend of Russian hackers supporting the Kremlin's ideology Ensuring cyber safety from ransomware attacks has become a national security priority for many nations across the world The evolving variants of ransomware attacks present a wider and more challenging threat landscape highlighting the need for collaborative work throughout the entire cyber ecosystem value chain In response to this evolving threat a book addressing the challenges associated with ransomware is very timely This book aims to provide a comprehensive overview of the evolution trends techniques impact on critical infrastructures and national security countermeasures and open research directions in this area It will serve as a valuable source of knowledge on the topic

Atrial Fibrillation: Selection of Management Strategy and Evaluation of Outcomes Rui Providencia,Serge Boveda,Teresa Strisciuglio,Alexandre Almorad,2024-09-13 Atrial fibrillation AF is an increasing arrhythmia disease its pathophysiology is the subject of many studies Rate and rhythm control along with stroke prophylaxis are the cornerstones of AF therapy With the recent evolution of techniques AF ablation is becoming the first therapeutic option in many centres worldwide Pulmonary vein isolation PVI for paroxysmal AF is now well established Additional methods

are now rising with non PV trigger ablation such as drivers posterior wall isolation epicardial ablation Recognition of physiopathological signature for AF is the next challenge for all rythmologists This will be achieved only by collecting different inputs such as imagery and mapping This Research Topic will focus on how to define a persistent AF ablation strategy and evaluate its outcome What is the role of pre ablation imagery MRI ultrasound CT in elaborating an AF ablation strategy Could post ablation imagery be a tool to evaluate the success of an ablation Furthermore the different and complex mechanisms initiating and maintaining AF are still under investigation leading to the absence of consensus for ablation treatment What are the roles played by the new mapping tools along with their algorithms regarding the outcome of ablation The recent development of new ablation technologies catheters such as Pulse Field Ablation and Radiofrequency balloon are bringing a lot of questions regarding long term results of PVI and non PV trigger ablation **Herança Digital:**
