Machine Learning and Deep Learning in Real-Time Applications Mahrishi, Mehul, Hiran, Kamal Kant, Meena, Gaurav, Sharma, Paawan, 2020-04-24 Artificial intelligence and its various components are rapidly engulfing almost every professional industry. Specific features of AI that have proven to be vital solutions to numerous real world issues are machine learning and deep learning. These intelligent agents unlock higher levels of performance and efficiency creating a wide span of industrial applications. However, there is a lack of research on the specific uses of machine deep learning in the professional realm. Machine Learning and Deep Learning in Real Time Applications provides emerging research exploring the theoretical and practical aspects of machine learning and deep learning and their implementations as well as their ability to solve real world problems within several professional disciplines including healthcare, business, and computer science. Featuring coverage on a broad range of topics such as image processing, medical improvements, and smart grids, this book is ideally designed for researchers, academicians, scientists, industry experts, scholars, IT professionals, engineers, and students seeking current research on the multifaceted uses and implementations of machine learning and deep learning across the globe.

3D Engine Design for Virtual Globes Patrick Cozzi, Kevin Ring, 2011-06-24 Supported with code examples and the authors' real world experience, this book offers the first guide to engine design and rendering algorithms for virtual globe applications like Google Earth and NASA World Wind. The content is also useful for general graphics and games, especially planet and massive world engines. With pragmatic advice throughout.

High Performance Computing for Computational Science -- VECPAR 2010 José M. Laginha, M. Palma, Michel Daydé, Osni Marques, Joao Correia Lopes, 2011-02-18 This book constitutes the thoroughly refereed post conference proceedings of the 9th International Conference on High Performance Computing for Computational Science VECPAR 2010 held in Berkeley, CA, USA, in June 2010. The 34 revised full papers presented together with five invited contributions were carefully selected during two rounds of reviewing and revision. The papers are organized in topical sections on linear algebra and solvers, on emerging architectures, large scale simulations, parallel and distributed computing, numerical algorithms.

Principles and Labs for Deep Learning Shih-Chia Huang, Trung-Hieu Le, 2021-07-06 Principles and Labs for Deep Learning provides the knowledge and techniques needed to help readers design and develop deep learning models. Deep Learning techniques are introduced through theory, comprehensively illustrated, explained through the TensorFlow source code examples, and analyzed through the visualization of results. The structured methods and labs provided by Dr. Huang and Dr. Le enable readers to become proficient in TensorFlow to build deep Convolutional Neural Networks (CNNs) through custom APIs, high level Keras APIs, Keras Applications, and TensorFlow Hub. Each chapter has one corresponding Lab with step by step instruction to help the reader practice and accomplish a specific learning outcome. Deep Learning has been successfully applied in diverse fields such as computer vision, audio processing, robotics, natural language processing, bioinformatics, and chemistry. Because of the

huge scope of knowledge in Deep Learning a lot of time is required to understand and deploy useful working applications hence the importance of this new resource Both theory lessons and experiments are included in each chapter to introduce the techniques and provide source code examples to practice using them All Labs for this book are placed on GitHub to facilitate the download The book is written based on the assumption that the reader knows basic Python for programming and basic Machine Learning Introduces readers to the usefulness of neural networks and Deep Learning methods Provides readers with in depth understanding of the architecture and operation of Deep Convolutional Neural Networks Demonstrates the visualization needed for designing neural networks Provides readers with an in depth understanding of regression problems binary classification problems multi category classification problems Variational Auto Encoder Generative Adversarial Network and Object detection
