GPS: Finding Direction on Your Faith and Life Journey John Strommen, 2024-07-31 What's the point of it all In the postmodern world the meaning and direction of human existence is increasingly a question mark with few satisfying answers forthcoming People of faith are not immune to such questions as they struggle to meaningfully connect their faith to their daily lives In *GPS Finding Direction on Your Faith and Life Journey* Strommen makes the case that much of this existential struggle is born of an anthropocentric worldview that has banished God to the margins leaving humans with the futile task of playing God as they attempt to create their own meaning purpose and identity Drawing on core Christian understandings through a Lutheran lens the author asserts that life giving meaning and purpose are gifts given by God alone who frees people from their self justifying ways to take an inventory of their many gifts and participate in a new creation where love of neighbor is the social currency It is the core theme of this book that God is in fact present deeply invested and at work in the everyday world calling everyone daily to partner with God to co create a more trustworthy loving and hopeful world

Identification and Partial Characterization of Actin from Glycine Max and Trifolium Repens Leslie John Szabo,1980 **Correlation Clustering** Francesco Bonchi,David García-Soriano,Francesco Gullo,2022-03-08 Given a set of objects and a pairwise similarity measure between them the goal of correlation clustering is to partition the objects in a set of clusters to maximize the similarity of the objects within the same cluster and minimize the similarity of the objects in different clusters In most of the variants of correlation clustering the number of clusters is not a given parameter instead the optimal number of clusters is automatically determined Correlation clustering is perhaps the most natural formulation of clustering as it just needs a definition of similarity its broad generality makes it applicable to a wide range of problems in different contexts and particularly makes it naturally suitable to clustering structured objects for which feature vectors can be difficult to obtain Despite its simplicity generality and wide applicability correlation clustering has so far received much more attention from an algorithmic theory perspective than from the data mining community The goal of this lecture is to show how correlation clustering can be a powerful addition to the toolkit of a data mining researcher and practitioner and to encourage further research in the area
