Guidelines for Older Drivers and Pedestrians L. K. Staplin,1997 **A Guide for Achieving Flexibility in Highway Design**,2004 Context sensitive solutions CSS reflect the need to consider highway projects as more than just transportation facilities Depending on how highway projects are integrated into the community they can have far reaching impacts beyond their traffic or transportation function CSS is a comprehensive process that brings stakeholders together in a positive proactive environment to develop projects that not only meet transportation needs but also improve or enhance the community Achieving a flexible context sensitive design solution requires designers to fully understand the reasons behind the processes design values and design procedures that are used This AASHTO Guide shows highway designers how to think flexibly how to recognize the many choices and options they have and how to arrive at the best solution for the particular situation or context It also strives to emphasize that flexible design does not necessarily entail a fundamentally new design process but that it can be integrated into the existing transportation culture This publication represents a major step toward institutionalizing CSS into state transportation departments and other agencies charged with transportation project development Signalized Intersections Lee August Rodegerdts,2004 This guide provides a single comprehensive document with methods for evaluating the safety and operations of signalized intersections and tools to remedy deficiencies The treatments in this guide range from low cost measures such as improvements to signal timing and signage to high cost measures such as intersection reconstruction or grade separation Topics covered include fundamental principles of user needs geometric design and traffic design and operation safety and operational analysis techniques and a wide variety of treatments to address existing or projected problems including individual movements and approaches pedestrian and bicycle treatments and corridor techniques It also covers alternative intersection forms that improve intersection performance through the use of indirect left turns and other treatments Each treatment includes a discussion of safety operational performance multimodal issues and physical and economic factors that the practitioner should consider Although the guide focuses primarily on high volume signalized intersections many treatments are applicable for lower volume intersections as well The information contained in this guide is based on the latest research available on treatments and best practices in use by jurisdictions across the United States Additional resources and references are highlighted for the student practitioner researcher or decisionmaker who wishes to learn more about a particular subject *Design Guidelines for At-grade Intersections Near Highway-railroad Grade Crossings* Mark Douglas Wooldridge,2000 Flexibility in Highway Design,1997 **Summary of Progress - National Cooperative Highway Research Program** National Cooperative Highway Research Program,2009 Publications - Transportation Research Board National Research Council (U.S.).
