Discrete Event Simulation for Health Technology Assessment J. Jaime Caro, Jörgen Möller, Jonathan Karnon, James Stahl, Jack Ishak, 2015-10-16 This is the first book to make all the central concepts of discrete event simulation relevant for health technology assessment Accessible to beginners the book requires no prerequisites and describes the concepts with as little jargon as possible It presents essential concepts a fully worked out implementation example approaches to analyze the simulations the development of the required equations model verification techniques and validation The book also covers various special topics and includes a real case study involving screening strategies for breast cancer surveillance **Using**

Discrete Choice Experiments to Value Health and Health Care Mandy Ryan, Karen Gerard, Mabel Amaya-Amaya, 2007-10-23 USING DISCRETE CHOICE EXPERIMENTS TO VALUE HEALTH AND HEALTH CARE In recent years there has been a growing interest in the development and application of discrete choice experiments DCEs within health economics The use of this relatively new instrument to value health and health care has now evolved to the point where a general text for practising professionals seems appropriate The few existing books in this area are either research monographs or focus almost entirely on more advanced topics By contrast this book serves as a general reference for those applying the technique to health care for the first time as well as for more experienced practitioners Thus the book is relevant to postgraduate students and applied researchers who have an interest in the use of DCEs for valuing health and health care Contributions are made by a number of leading experts in the field enabling the book to contain a uniquely rich mix of research applications and methodological developments Part 1 summarises how DCEs can be implemented from experimental design to data analysis and the interpretation of results In many ways this can be regarded as a crash course on the conduct of DCEs Extensive reference is made throughout to other sources of literature where the interested reader can find further details Part 2 presents a series of case studies illustrating the breadth of applications in health economics

Methods for the Economic Evaluation of Health Care Programmes M. F. Drummond, 2005 This highly successful textbook is now available in its third edition Over the years it has become the standard textbook in the field world wide It mirrors the huge expansion of the field of economic evaluation in health care since the last edition was published in 1997 This new edition builds on the strengths of previous editions being clearly written in a style accessible to a wide readership Key methodological principles are outlined using a critical appraisal checklist that can be applied to any published study The methodological features of the basic forms of analysis are then explained in more detail with special emphasis of the latest views on productivity costs the characterisation of uncertainty and the concept of net benefit The book has been greatly revised and expanded especially concerning analysing patient level data and decision analytic modelling There is discussion of new methodological approaches including cost effectiveness acceptability curves net benefit regression probabilistic sensitivity analysis and value of information analysis There is an expanded chapter on the use of economic evaluation

including discussion of the use of cost effectiveness thresholds equity considerations and the transferability of economic data This new edition is required reading for anyone commissioning undertaking or using economic evaluations in health care and will be popular with health service professionals health economists pharmacand health care decision makers It is especially relevant for those taking pharmacoeconomics courses

Economic Evaluation of Cancer Drugs Iftekhar Khan, Ralph Crott, Zahid Bashir, 2019-06-14 Cancer is a major healthcare burden across the world and impacts not only the people diagnosed with various cancers but also their families carers and healthcare systems With advances in the diagnosis and treatment more people are diagnosed early and receive treatments for a disease where few treatments options were previously available As a result the survival of patients with cancer has steadily improved and in most cases patients who are not cured may receive multiple lines of treatment often with financial consequences for the patients insurers and healthcare systems Although many books exist that address economic evaluation Economic Evaluation of Cancer Drugs using Clinical Trial and Real World Data is the first unified text that specifically addresses the economic evaluation of cancer drugs The authors discuss how to perform cost effectiveness analyses while emphasising the strategic importance of designing cost effectiveness into cancer trials and building robust economic evaluation models that have a higher chance of reimbursement if truly cost effective They cover the use of real world data using cancer registries and discuss how such data can support or complement clinical trials with limited follow up Lessons learned from failed reimbursement attempts factors predictive of successful reimbursement and the different payer requirements across major countries including US Australia Canada UK Germany France and Italy are also discussed The book includes many detailed practical examples case studies and thought provoking exercises for use in classroom and seminar discussions Iftekhar Khan is a medical statistician and health economist and a lead statistician at Oxford University's Center for Statistics in Medicine Professor Khan is also a Senior Research Fellow in Health Economics at University of Warwick and is a Senior Statistical Assessor within the Licensing Division of the UK Medicine and Health Regulation Agency Ralph Crott is a former professor in Pharmacoeconomics at the University of Montreal in Quebec Canada and former head of the EORTC Health Economics Unit and former senior health economist at the Belgian HTA organization Zahid Bashir has over twelve years experience working in the pharmaceutical industry in medical affairs and oncology drug development where he is involved in the design and execution of oncology clinical trials and development of reimbursement dossiers for HTA submission
